

# Advanced Pharmacy Clinical Services

Advanced Pharmacy Clinical Services (APCS) is ScriptPro's patient case management platform for the complex clinical care associated with chronic disease, pain management, and specialty drug therapies. Leveraging ScriptPro's world class pharmacy management system, APCS is uniquely positioned to combine patient profile and dispensing data with clinical program documentation. APCS is the most powerful platform available for advanced patient care.

## Clinical Programs

Clinical programs serve as the framework for APCS, driving workflow, tasks, and treatment documentation for patient case management. Every APCS installation includes ScriptPro's Standard Protocols, such as Enrollment and First Fill Assessment and Reassessment, and allows users to easily create their own clinical programs.

## Licensed Clinical Programs

ScriptPro also licenses clinical programs targeted to therapeutic class, disease state, or specific drugs. Using ScriptPro's clinical content ensures your approach for these therapies is current and follows industry best practices.

## Available Resources

ScriptPro provides additional resources and collateral with every APCS installation to ensure consistency of care for clinicians and health care professionals. Examples of additional resources include Clinical Intervention, Patient Care Plan, Patient Satisfaction Survey, and Refill Review protocols for ensuring optimal outcomes for patients through goal planning and identifying barriers to care. These resources can be used to document interventions and can assist in the accreditation process for organizations, such as Utilization Review Accreditation Commission (URAC) and Accreditation Commission for Health Care (ACHC).

## Complex Care. Simplified.

APCS facilitates a team approach to complex care, allowing you to deliver meaningful patient outcomes. APCS is built for the future of healthcare. A serious system for serious care.

## Features and Benefits

- High availability web access for enterprise-wide patient care
- Build and manage your pharmacy's clinical programs using ScriptPro's standard protocols
- License Clinical Programs developed by ScriptPro's clinical research team
- Standardize patient case management across clinical care teams
- Manage critical patient touch points via task calendar
- Configurable transaction reporting necessary for compliance adherence

ScriptPro's licensed programs and associated protocols are built using gold standard clinical guidelines by combining relevant drug and disease information to effectively support pharmacists providing critical care. ScriptPro's team of clinical pharmacists creates protocols from published versions of industry standard treatment guidelines, prescribing information, and other relevant primary references. All cited references are reviewed monthly and continuously monitored for periodic updates.

# Advanced Pharmacy Clinical Services

## Specifications\*

APCS is a Microsoft Azure-hosted solution leveraging platform as a service (PaaS) offerings. Sensitive information is encrypted both in transit and at rest using Azure Encryption at Rest and SQL Server Transparent Data Encryption standards. Single sign-on authentication and authorization is supported via Active Directory Federation Services and OAuth 2.0.

**Supported Pharmacy System Platforms:** SP Central Pharmacy Management System

**Communication:** Port TCP 433
