

We have identified the 3 most common issues people have run into when attempting to disinfect their space for their families, staff and clients. Disinfect & Fog has prepared Fogger Starter Kits to easily deal with the day-to-day cleaning and disinfecting of your environments.

The Disinfect & Fog 3 D's of Disinfection

1 Dilution

Disinfect & Fog has done its homework and found the safest and most effective disinfectant for the fogging process and your environment. It is important to use an environmentally friendly, non-toxic, all-natural solution that kills 99.99% of bacteria, viruses and other harmful pathogens. We provide this as a pre-mixed dilution so that it is easy and ready to use (RTU). This takes away the mess and worries that it's working as it should without overuse of disinfectant.

#2 Distribution

Disinfect & Fog has found the perfect dispensing system to properly apply the disinfectant quickly and effectively. The Nano Atomizer is a handheld thermal fogger that produces a dry fog allowing you to spray all surfaces including electronics. The dry fog application reduces the amount of disinfectant needed saving time and money while providing maximum coverage and disinfection efficiency.

#3 Dwell Time

One of the advantages that fogging provides is that it ensures you're doing the job properly. This is because fogging disinfects the air and all surfaces, even the hard to reach areas providing a completely clean atmosphere. When using the proper disinfectant, there is no need to rinse or wipe - even on food prep surfaces. All this allows for dwell time, which is the time the solution needs to properly kill bacteria, viruses and other pathogens.

Disinfect & Fog Supports Oxford Learning:

- Special Disinfect & Fog Starter Kit offer
- On-going support
- Free shipping
- Video training and free Q&A
- Dedicated account management
- Just a call away
- Full replacement warranty

Take advantage of our easy, risk-free package for Oxford Learning - offer ends November 30th, 2020.
