AYA™

Mark Saffell/David Ritch

The ultimate in ergonomic elegance, the AYA™ Chair is based on the principles of natural body motion when reclining. The simplicity of function uses the occupant's own weight to control the back position. As you recline and stop, the chair will stay in that position. There is no tension control, as the weight of the occupant provides the resistance using gravity and friction as the position control. There is only one control on the chair which adjusts height and locks the seat in one of five positions.

Features:

- Self weighing mechanism
- Hip pivot motion
- Chair rests in any position
- No tension control
- Simple control for height adjustment and 5 position back lock
- Full lumbar support through full range of motion
- Flex feature in top of back
