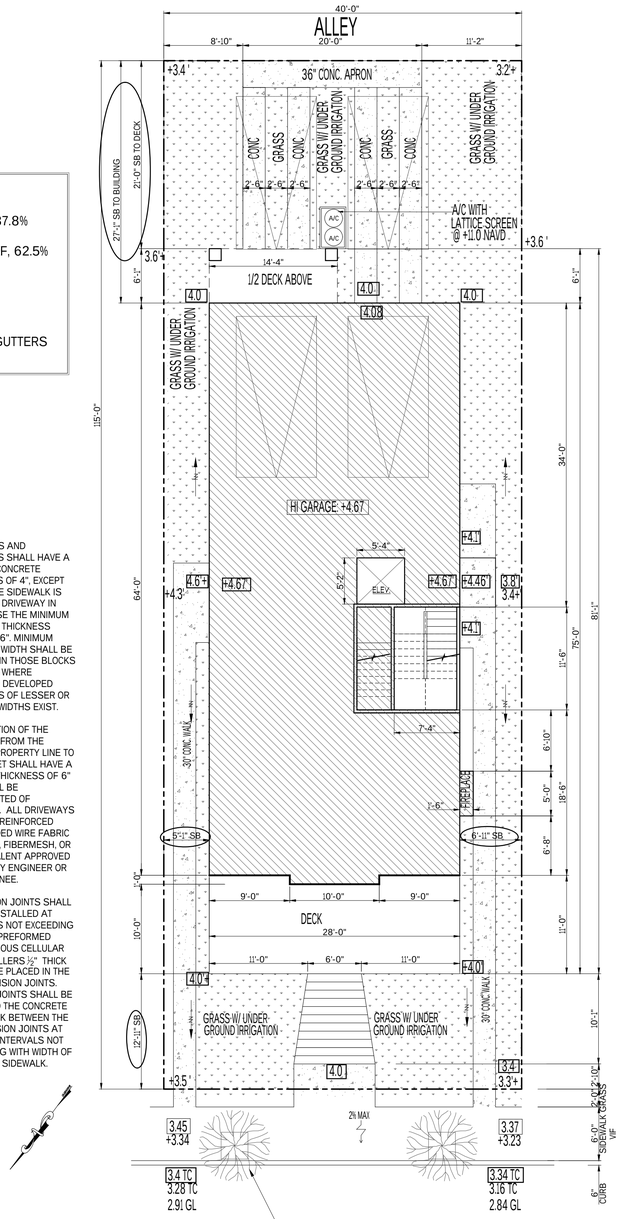
3541-43 HAVEN AVE

LOT 3 BLOCK 3504
LOT SIZE = 4,600
BUILDING COVERAGE = 1,740 SF, 37.8%
(ALLOWABLE = 1,748 SF, 38%)
IMPERVIOUS COVERAGE = 2,878 SF, 62.5%
(ALLOWABLE = 2,990 SF, 65%)
RIDGE EL. = 41.60'
HI GARAGE = +4.67' NAVD
FIRST FL. EL. = +12.0 NAVD
BFE = +9' NAVD
PROPOSED STRUCTURE TO HAVE GUTTERS AND DOWNSPOUTS

NOTE
SIDEWALKS AND DRIVEWAYS SHALL HAVE A MINIMUM CONCRETE THICKNESS OF 4", EXCEPT WHERE THE SIDEWALK IS PART OF A DRIVEWAY IN WHICH CASE THE MINIMUM CONCRETE THICKNESS SHALL BE 6". MINIMUM SIDEWALK WIDTH SHALL BE 6' EXCEPT IN THOSE BLOCKS OR AREAS WHERE PARTIALLY DEVELOPED SIDEWALKS OF LESSER OR GREATER WIDTHS EXIST.

THAT PORTION OF THE DRIVEWAY FROM THE INTERIOR PROPERTY LINE TO THE STREET SHALL HAVE A MINIMUM THICKNESS OF 6" AND SHALL BE CONSTRUCTED OF CONCRETE. ALL DRIVEWAYS SHALL BE REINFORCED WITH WELDED WIRE FABRIC (MIN. 6X6), FIBERMESH, OR AN EQUIVALENT APPROVED BY THE CITY ENGINEER OR HIS DESIGNEE.

EXPANSION JOINTS SHALL BE INSTALLED AT INTERVALS NOT EXCEEDING 20'. PREFORMED BITUMINOUS CELLULAR JOINT FILLERS ½" THICK SHALL BE PLACED IN THE EXPANSION JOINTS. FORMED JOINTS SHALL BE CUT INTO THE CONCRETE SIDEWALK BETWEEN THE EXPANSION JOINTS AT EQUAL INTERVALS NOT EXCEEDING WITH WIDTH OF THE SIDEWALK.



(2) REGENT SCHOLOR TREES 2.5"-3" CAL. / BB/ 12'-14' TALL W/ NO BRANCHES BELOW 7'-0" MIN. 30' FROM ADJACENT TREES, TYP.

General Notes and Specifications

All Construction shall conform to the current: Uniform Construction Code, 2018 International Residential Code New Jersey Edition, 2018 International Plumbing Code, 2018 International Mechanical Code, 2017 NEC, UPC?? for One and Two Family Duellings, Local Ordinances and FEMA Flood Regulations.

Drawings and Design are the property of the architect and shall not be reproduced without expressed written consent of the architect.

Contractor shall check all dimensions and verify all existing conditions before proceeding with the work. The contractor is responsible to, immediately upon discovery, report to the Architect any omissions, inadvertent exclusions and inconsistencies within these documents. The Architect shall be notified, immediately, of any changes to the plans as specified. Any deviations from these plans as specified is strictly prohibited and must be coordinated through the Architect. DO NOT SCALE DRAWINGS.

Shop Drawing Submittal
The contractor is required to submit to the Architect for approval all shop drawings related to the design, Fabrication and installation of any material and equipment prior to the approval of shop drawings not permitted.

Dimensions
All dimensions are to be confirmed by the builder prior to commencing work. Any deviations or discrepancies are to be reported to the architect before proceeding. The builder's attention is specifically addressed to the height limitation established by the drawing.

Windows and Door Glazing
(a) Type and Manufacture - Vivinco 5-Series or equal
(b) All exterior windows shall be complete with insulating glass and insect screens.
(c) At least one bedroom window shall exceed 5.7 ft² net at egress area per side with maximum height of 44" above finished floor, net clear height opening of 24" and net clear width opening of 20". All egress windows must maintain a minimum 24" height to the sill from the interior finish floor for all windows that exceed a height of 84" from the window sill to the exterior grade or deck below.

Doors
(a) All exterior doors shall be flashed top and bottom, caulked, and weather-stripped and emit thresholds provided.
(b) All interior doors to 1" undercut.
(c) Safety glass shall be used in all doors as required in the 2015 IRC section 3084 and as noted on the drawings.
(d) All doors between garage and duelling shall be 1/4 hour minimum.
(e) All doors shall have a max. 1/2" High threshold from finish floor.
(f) All garage doors must withstand 30 psf wind loads

Flashing
Flashing provided 26 ga. Economy stainless steel (ss) flashing over all windows and doors in exterior walls. Provide 26 ga. ss pan flashing at thresholds and sills of all exterior doors. Provide 26 ga. ss flashing at ridges, valleys, and drip edges of roof. Provide termite shield on top of all foundation walls. Provide sall flashing, base, cap, thru-wall and counter flashing, etc., as required to prevent entrance of moisture and water. Provide caulking at head, jamb and sills. Caulk all vertical and horizontal joints at trim, openings and penetrations, joints, etc.

Stair Railings
Railings shall be constructed so that a 4" diameter ball cannot pass through.

Guard rails shall be capable of resisting a concentrated load of 200 lbs/ft along the top railing and a uniform load of 50 plf. Intermediate rails shall be capable of a horizontal concentrated load of 100 lbs.

Stairs
(a) All risers shall be 8 1/4" max.
(b) All treads shall be 9" min.
(c) Min. width of stairs shall be 36".
(d) Landing depth shall be min. 36".
(e) Min. head room clearance 6'- 8".
(f) Guard rails shall be 36" high min.
(g) Handrails shall be min. 1 1/4" diameter to 2" diameter max. and shall be mounted at 34" to 38" above tread nosing.
(h) All exterior stair lumber shall be pressure treated.
(i) All risers shall be closed.

Closets
Clothes closets shall have one shelf and pole (closets over 4'0" shall have shelf support), all linen closets shall have a minimum of 5 shelves.

Fireplaces
Fireplace hearth shall be constructed of noncombustible material and shall extend 18" in front and 8" on sides of openings less than 6 sf and 20" in front and 12" on sides for openings 6 sf or larger.

Gypsum Wallboard
(a) Minimum 1/2" thickness
(b) All gypsum wallboard in bathrooms and wet areas shall be water-resistant type.
(c) Wall Finishes Below BFE: Exterior wall finish shall be stucco: Interior Fire rated walls shall be Dur-O-Rock. Interior non-fire rated walls may be plaster, sonder board, or dur-o-rock.

Materials Below Base Flood Elevation
Exterior wall finishes shall be stucco: Interior fire rated walls shall be Dur-O-Rock or Hardiplark. Interior non-rated fire walls shall be plaster, sonder board, Dur-O-Rock or Handiplark up to 12" above BFE . Framing below BFE shall be PT. Insulation below BFE shall be rigid polystyrene type insulation.

Access
(a) Provide 22"x 30" minimum access to attic.
(b) Provide crawl space access 18"x 24".
(c) Provide access to plumbing fixture control valves.

Vents
(a) Attic and soffit vents shall be screened.
(b) Flood vents shall be 8"x 16" Smart Vents as per NJAC7:13-15.11(c)3
(c) All sills to Crawl Space vents must be mounted maximum 6" above adjacent grade.
(d) All ridges shall be supplied with continuous ridge vents.

Air Leakage
(a) Building must meet air leakage requirements of 2015 IECC

Anchors
(a) Sill straps are not allowed in flood zone.
(b) Anchor bolts galv. must be 5/8" diameter, 18" long, 12" from all corners and end cuts of sill plates, then at 2'-8" on center. Each sill plate shall have a minimum 2 anchors per board. All Anchor Bolts must have 3" galvanized washers
(c) Sheathing to lap floor box horizontally and shall extend equidistant on all above as to sall below.
(d) On barrier islands, use specified hurricane clips and anchors to hold down floor joists and roof rafters at all levels. Simpson G85 (TM4X) or equal for interior areas and stainless steel for ALL exterior applications NO EXCEPTIONS.
(e) All anchors that are in contact with any pressure treated wood shall be stainless steel - NO EXCEPTIONS.
(f) All nails used in galvanized hardware must be galvanized and all all nails used in stainless steel hardware must be stainless steel - NO EXCEPTIONSwire.
(g) All specified hangers, clips, ties, hold downs, etc.,are "Simpson Strong-Tie" brand. Before substituting another brand, confirm load capacities based on reliable published testing data or calculations. All substitutions from the specified hangers, clips, ties, hold downs, etc.,must be submitted the Architect for evaluation and written approval prior to installation

DESIGN LIVING LOADS
Living Areas 40#/sf
Sleeping Areas 30#/sf tread
Attic Storage 20#/sf
Deck Area Same as floor served
Balcony Area Same as floor served
Wind Load 125 MPH Ultimate Load / 91 MPH Design Load
The contractor shall perform work in a safe and non-hazardous manner. Shoring and structural supports shall be securely in place prior to any demolition of walls.

Contractor is responsible to keep site and structure free from miscellaneous debris and equipment and shall maintain the same to a clean, non hazardous, workable environment.

DUELLING UNIT RATED PENETRATIONS
ALL PENETRATIONS THROUGH A FIRE RATED WALL OR FLOOR ASSEMBLY SHALL BE PROTECTED. PROTECTIONS SHALL BE WITH A DEVICE OR FIRE STOPPING WHICH HAS A MINIMUM FIRE RESISTANCE RATING WHICH IS EQUAL TO THE RATED WALL OR FLOOR ASSEMBLY BEING PENETRATED

Timber Piling Foundation
(a) Timber piles shall be of Southern Yellow Pine and shall comply with the requirements of the standard specifications for round timber piles, AWPA U 1. Minimum allowable bending strength Fb = 2,400 psi
(b) Two test piles shall be driven at opposites ends of the structure to determine final length of piles. All piles shall be natural taper shall be full length and unspliced and shall have a minimum butt diameter of 10" (315") measured 36" from the end of the butt.
(c) Piles shall be CCA 0.8 PCF pressure treated as per ASTM Use Category UC4C. The tops of all cut-off piles shall be field treated with a PT preservative in accordance with AWPA M4.
(d) Piles shall be driven through all fills and organic layers until the design bearing capacity is reached as determined by the Davidson 4 Townsend Formula. Min. depth 10' Below MSL.
(e) All piles shall be installed plumb and in their design location.
(f) If any pile is installed out of plumb more than 2 percent of the pile length, the pile shall be rejected unless the design of the foundation can be modified to adequately resist the resulting lateral forces as determined by the Engineer.
(g) A tolerance of 3 inches from the designated location will be permitted in the installation of individual piles.
(h) Should any pile be damaged during driving or be driven outside the specified tolerance for position or stated herein, otherwise not conform ish requirements, it shall be abandoned and additional pile or piles shall be furnished and installed at locations designated by the Architect at no additional cost to the Owner.
(i) All unacceptable piles shall be cut off below grade as shown on the Drawings at the location.
(j) The Contractor shall establish and locate all lines and levels and shall be responsible for the correct location and cutoffs of all piles.
(k) All hardware to be hot dipped galvanized.
(l) All bolts in piling stringer connections, after tightening bolts over washers, to be peened with a chisel in a manner not to allow removal or loosening of nuts.
(m) All piles should be driven to 2 ton capacity unless otherwise noted.
(n) Architect/Engineer of record's office or representative is required to inspect the installation of all piles and shall be present during the installation of all piles. All pile logs shall be provided to the Architect/Engineer of record's office within 5 days of completion of driving piles.
(o) The pile contractor is responsible for protecting structures in the area from vibrations caused by the driving of all piles

Electrical
(a) All electrical work to conform with the 2017 National Electrical Code, latest revisions.
(b) Electrical contractor shall verify and check all conditions and equipment prior to proceeding with work. Any discrepancies shall be brought to the attention of the Architect. See other drawings for applicable information.
(c) Electrical contractor shall coordinate his work with the Atlantic Electric Co., and shall cooperate with them in determining loads, hookups, temporary service, etc.
(d) Contractor shall provide smoke detector of approved design in each level in locations as recommended by manufacturer and/or as shown on plans. Wire smoke detectors so that alarm signal can be relayed to all locations.
(e) All wire shall be a minimum No. 12 AWG Type THW copper rated at 75 degrees C and 167 degrees F to all kitchens, baths, appliances and equipment. Provide conduit where required by MEC (min. 1/2" conduit) home run circuits more than 75' from panel board shall be No. 10 AWG or larger as required. Remaining wiring shall be 14 AWG Type THW copper increased to 12 AWG on homeruns greater than 75'.
(f) All bath and powder room convenience outlets shall be ground fault circuit interrupt type. Exterior outlets shall be wired to a ground fault circuit breaker and weatherproof. No more than 2 GFI outlets per 20 amp circuit.
(g) Where switches, receptacles and other outlets are shown back-to-back in interior partitions, they shall be staggered to prevent the transmission of sound through partition when fire rated wall assemblies, locate each outlet in a separate and adjacent stud space to avoid openings in both faces of fire rated wall in a single stud space.
(h) Do not scale drawings. Verify location of equipment and fixtures with other trades and at the job site.
(i) Circuit the lighting and receptacles on different circuits so that each space contains parts of at least two circuits.
(j) Provide a maximum of 8 convenience outlets on any one 20 amp circuit, maximum 6 on any one 15 amp circuit, and maximum 1 kitchen appliance receptacles on any one 20 amp circuit.
(k) See panel sumary for individual outlet circuits.
(l) Telephone and computer outlets shall be prewired during construction with wall outlets.
(m) All lighting fixture selections and final locations to be by Owner.
(n) All recessed lights shall be rated for insulation contact.
(o) All recessed light fixtures housings in fire rated floor faming shall be UL rated to match the required fire rating within said floor.

PANEL SUMMARY
120/240 volt, 200 amp, single phase, 3 wire

Description	Poles
Main Breaker	200/2
Range	60/2
A.C. Condensing Unit	30/2
Dryer	30/2
Microwave	20/1
Washer	20/1
Dishwasher	20/1
Refrigerator	20/1
Furnace	20/1
Waterheater (Optional)	20/1
General Lighting, outlets, etc.	20/1
Spares (2)	20/1
Total	30

HVAC
(a) All mechanical work and systems shall conform to 2018 IMC Code and to all other applicable codes and standards, latest revisions.
(b) Mechanical contractor shall verify and check all conditions, dimensions, and equipment installation prior to proceeding with the work.
(c) Mechanical contractor shall coordinate his work with all other trades.
(d) See other drawings for applicable information.
(e) Mechanical contractor shall balance entire system for proper and adequate heating/cooling of each space and provide all testing and adjustments.
(f) All piping ducts, etc. shall be run between joists, and/or between floor structure and ceiling in furred out spaces.
(g) Provide minimum 1" thick insulation around all pipes and/or ducts in unheated spaces.
(h) Provide flexible connections between duct work and air handling unit.
(i) Provide turning vanes at all 90 degree bends in duct work.
(j) All joints in duct work shall be made air tight.
(k) All registers shall have dampers and be fully adjustable.
(l) All natural gas piping shall be in accordance with AGA Standards and all applicable codes and standards.
(m) All breathing shall be of type and manufacture approved by heating unit manufacturer for specific unit provided.
(n) Fire damper approved by applicable codes shall be provided in all ducts penetrating fire-rated assemblies and/or required by codes.
(o) No duct shall be located below Base Flood Elevation.
(p) HVAC CONTRACTOR SHALL PROVIDE DUCT PLANS FOR PERMIT SUBMISSION. PLANS TO INCLUDE EQUIPMENT, DISTRIBUTION LOCATION, SIZE AND FLOW, LOCATION OF DAMPERS AND ALL MATERIALS
(q) HVAC Equipment condensate drains shall be min ¾" pvc and shall drain to exterior of building.

Plumbing
(a) All plumbing work shall conform with the 2018 National Standard Plumbing Code, latest revisions.
(b) Plumbing contractor shall verify all conditions, equipment and fixture installations prior to proceeding with work. No cutting or nothing of wood joists, beams, or trusses shall be permitted. Any discrepancies report to architect prior to construction.
(c) Plumbing work shall be coordinated with all other trades.
(d) See also floor plans for applicable information.
(e) All water piping shall be copper or approved plastic.
(f) Provide shock absorbers at clothes washers and as required.
(g) Water piping shall be sloped to allow the entire system to be drained through drain vavles.
(h) Soil lines, vents, branch lines and stacks shall be PVC or cast iron 'No Hub'.
(i) All penetrations through fire rated assemblies shall be tightly packed-fire stopped in accordance with NFPA.
(j) All water piping in unheated areas shall be insulated.
(k) Each fixture shall be valved separately.
(l) All exterior hose bibbs shall be freezeproof type.
(m) All fixtures and colors shall be selected by Owner.
(n) Do not scale drawings. (drawings are schematic only)
(o) Minimum slope on soil/waste pipe 1/4" per foot.
(p) All water piping shall be sloped to allow the entire system to be drained thru drain valves which shall be placed at all low points in system. All utility lines into building and all soil/waste lines out of building shall be sleeved ain proper caulking to prevent the seepage into the building of gas or other fumes.
(q) All piping in unheated area shall be prosected from freezing. The stud cavity shall be filled fully with foam (closed cell, Tbrico, R, R factor is "1 per inch" Where possible 2x6 studs shall be utilized to to accommodate a minimum R-19. Incorporation of a heat source is preferred by placing adjacent ductwork or furnaces. Absent that heat tracing tape should be applied to all water supply lines.

(r) All drain piping installed in exterior walls, attics, and other areas exposed to outdoor temperatures shall be protected from freezing with pipe wrap by Reflectix R3 or equal.
(s) All condensate piping shall drain to a sump pit or to the exterior of the building above DFE.

Plumbing Schedule

Fixture	H/J	C/J	Waste	Remarks
Water Closet------	1/2"	1/2"	3"	
Lavatory--------	1/2"	1/2"	1 1/4"	
Tub------------	1/2"	1/2"	1 1/2"	
Shower----------	1/2"	1/2"	2"	
Sink------------	1/2"	1/2"	1 1/2"	
Dishwasher------	1/2"	--	--	Connect drain to sink drain
Washer----------	1/2"	1/2"	2"	
Hose Bibbs------	--	1/2"	--	Vacuum break and frost-free

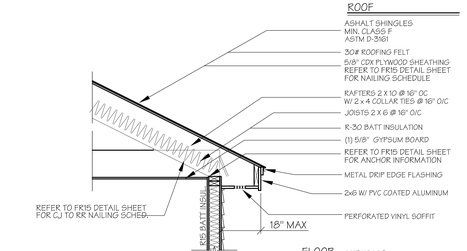
Concrete
(a) Concrete shall conform to ASTM 615A/B with a minimum 28-day comprehensive strength of 3000 PSI.
(b) Reinforced Concrete shall be done in accordance with ACI Publication 318-71, all reinforcing steel shall conform to ASTM A-615 grade 60.
(c) Concrete slab on grade reinforcing can be eliminated in lieu of utilizing fiberglass reinforced concrete (fibermesh)

Concrete Masonry Units
(a) All concrete masonry units shall conform to ASTM C90 (Hollow Load Bearing), C129 (Hollow Non-Load Bearing) or C145 (Solid Load Bearing). All mortar Grade "M".

Wood Framing
Wood spans of structural wood members are based on a minimum fiber stress of 675 + fb and a minimum elastic modulus of 1,300,000 (E) such as Hem-Fir No. 2 or better. No utility grade or non stress grade lumber may be used structurally. Kiln Dried framing to be used through out.
(a) Headers shall be (2) 2"x 10" unless otherwise noted.
(b) Bridging Joists shall have one row of bridging (1"x 3", metal or solid) for every 8'0" of span. Ceiling Joists may have strong backs in lieu of bridging.
(c) All lumber and sill plates along with sall studs and framing lumber in contact with CMU and/or concrete shall be pressure treated in accordance with AWPA M4.
(d) Collar ties shall be 32" on center.
(e) Firestopping shall be at, but not limited to, kitchen cabinets, walls, nanaard roofs, soffits and any concealed space.
(f) All roof rafters shall be fastened with metal tie-downs by Simpson as specified.
(g) All field cut ends, notches, and drill holes in all PT Lumber shall be field treated with a wood preservative in accordance ish AWPA M4.
(h) All posts which support beams loads shall be continous through all floor framing. Solid wood packing of equal material and size of supported posts shall be installed within the floor framing cavity at all post locations, including sindows and doors.
(i) All PRT lumber may have factory applied coating or may have field applied coating by No-Burn

IMPACT INSULATION CLASS RATINGS (IIC) MIN CODE REQUIRED 45
GREEN GLUE NOISEPROOFING JOIST TAPE PROVIDES AN IIC OF 44 IN ACCORDANCE WITH TEST OL09-03613 BY ORFIELD LABORATORIES INC IN COMPLIANCE WITH ASTM E 90 AND ASTM E 492. THIS TEST WAS PERFORMED WITH 1 LAYER OF GYPSUM BOARD CEILING U.S. GYPSUM FC 5120 1 HR FLOOR.

AN ADDITIONAL INCREASE TO THE IIC RATING OF TWO (2) IS PERMITTED IN WHEN THE CEILING MEMBRAIN IS DOUBLED IN THICKNESS IN ACCORDANCE WITH A REPORT PREPARED BY "CONSTRUCTION TECHNOLOGY" ENTITLED "CONTROLLING THE TRANSMISSION OF IMPACT SOUND THROUGH FLOORS" UPDATE NO 35 DATED DECEMBER 1998, PAGE 6, PARAGRAPH 2. THIS INCREASE OF 2 ADDED TO THE TESTED IIC RATING OF 44 EXCEEDS THE CODE REQUIRED MINIMUM OF 45.



CONTRACTOR MUST INSTALL "GREEN GLUE - NOISEPROOFING JOIST TAPE" BETWEEN ALL FLOOR JOISTS AND SUBFLOOR MEMBRANE. "GREEN GLUE MASTIC" MUST BE INSTALLED IN ALL SHEATHING JOINTS.SEE GENERAL NOTES FOR TEST REPORT INFORMATION

NAILING
~~IF PNEUMATIC~~ NAILING GUNS ARE USED, ANY NAIL WHICH CRUSH INTO THE PLYWOOD OR OTHER WOOD ARE NOT ACCEPTED. ADDITIONAL NAILS MUST BE PLACED 1" AWAY FROM ALL REJECTED NAILS.
THE CONTRACTOR MUST USE A REGULATOR ON EACH HOSE SO EACH NAIL GUN DELIVERS THE PROPER FORCE AND NO MORE. A PROPER SIZE AIR STORAGE TANK SHALL BE USED FOR 2 MORE GUNS SO NAILS ARE DRIVEN FLUSH WITH PLYWOOD. TYPICAL FOR ALL ROOF, FLOOR AND WALL SHEATHING.

HOW TO USE THESE CHARTS
1. Determine the hole shape (round, square or rectangular) and select the appropriate chart - A or B.
2. Under HOLE SIZE, locate the column which meets or exceeds the size of hole you require.
3. Use the first two columns to identify the TJI joist series and depth being used in your floor or roof system.
4. Scan right across the row until you intersect the column which contains the hole size you selected.
The value shown is the required minimum distance from edge of the hole to the inside face of the nearest support.

CHART A - ROUND HOLES

*Rectangular holes based on measurement of longesst side.

DO NOT
CUT OR NOTCH
FLANGE

FULL WEB DEPTH RECTANGULAR
HOLES ARE ALSO POSSIBLE.
CONTACT YOUR TRUSS JOIST MACMILLAN
REPRESENTATIVE FOR ASSISTANCE.

GENERAL NOTES

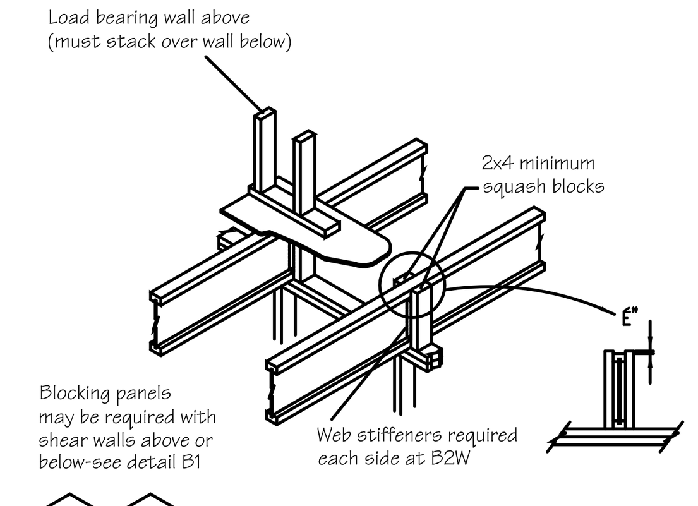
- If more than one hole is cut into the web, the distance between the edges of the holes must be at least 2x the length of the largest hole.

- Holes may be located vertically anywhere within the web. Leave Ê" of web minimum at top and bottom of hole.

- TJI joists are manufactured with 1Ð" perforated knockouts in the web at approximately 12" on-center along the length of the joist.

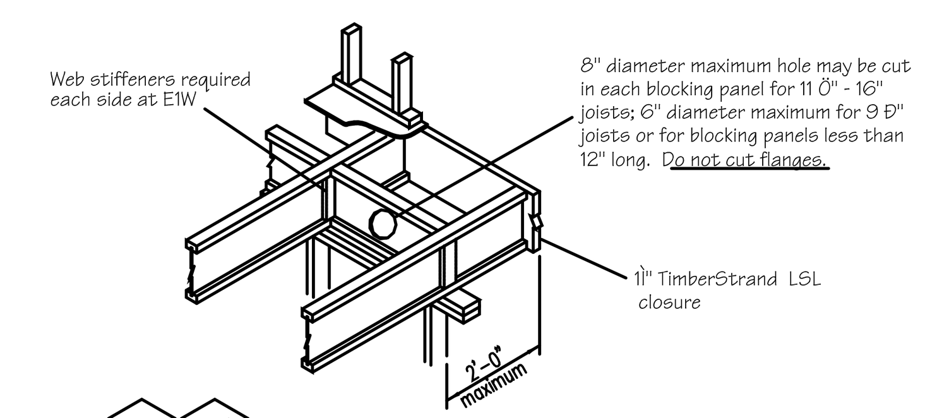
- Distances in the charts shown are based on uniformly loaded joists using the maximum loads shown for any of the tables listed within current Trus Joist MacMillan literature. For other load conditions or hole configurations not included in these charts, refer to our TJ-Beam software or contact your Trus Joist MacMillan representative.

- For simple span (5 foot minimum) uniformly loaded joists meeting the requirements of current Trus Joist MacMillan literature, one maximum size round hole may be located at the center of the joist span provided no other holes occur in the joist. DO NOT cut into joist flanges when cutting out web.



B2 B2W See Floor Span Tables and General Notes in current Trus Joist MacMillan literature for exceptions

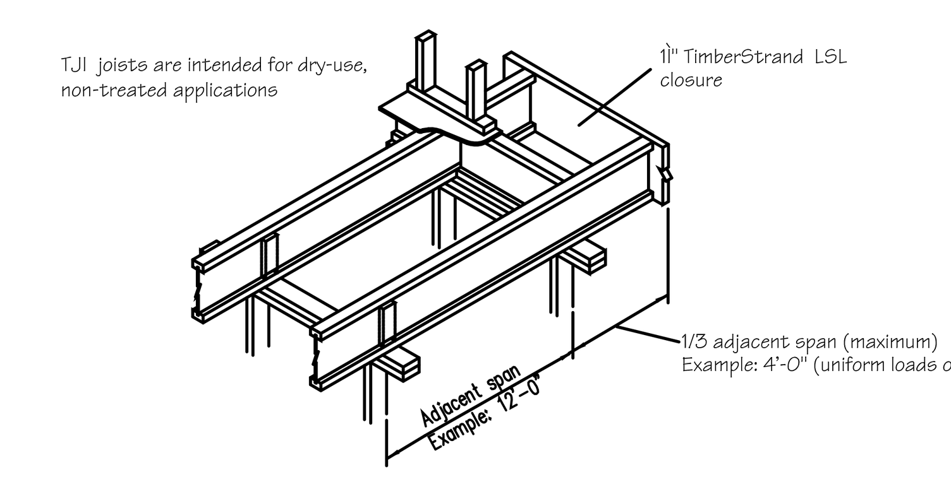
LOAD BEARING CANTILEVER



E1 E1W

LOAD BEARING CANTILEVER

NON-LOAD BEARING CANTILEVER



F2 TJI joists may be cantilevered up to 1/3 the adjacent span if not supporting concentrated loads on the cantilever. Cantilevers exceeding 4 feet may require special consideration. Refer to our TJ-Beam or TJ-Xpert software or contact your Trus Joist MacMillan representative for assistance.

Notes:
1. This drawing provides a condensed list of firestop systems for a variety of through penetration applications. Additional systems are offered by Nelson Firestop Products. These may be accessed on the "Products/Systems" tab at our website at www.nelsonfirestop.com. See the "Applications/Systems Index".
2. Underwriters Laboratories systems may be accessed at the UL website www.ul.com under "Certifications" or more specifically http://database.ul.com/cgi-bin/XYV/template/LISEXT/1FRAME/gothernbr.html
3. All systems shown are rated minimum 2 hour "F" rating.
