

Endless Possibilities...

Detectomer® Metal Detectable/ X-ray Inspectable Sheets

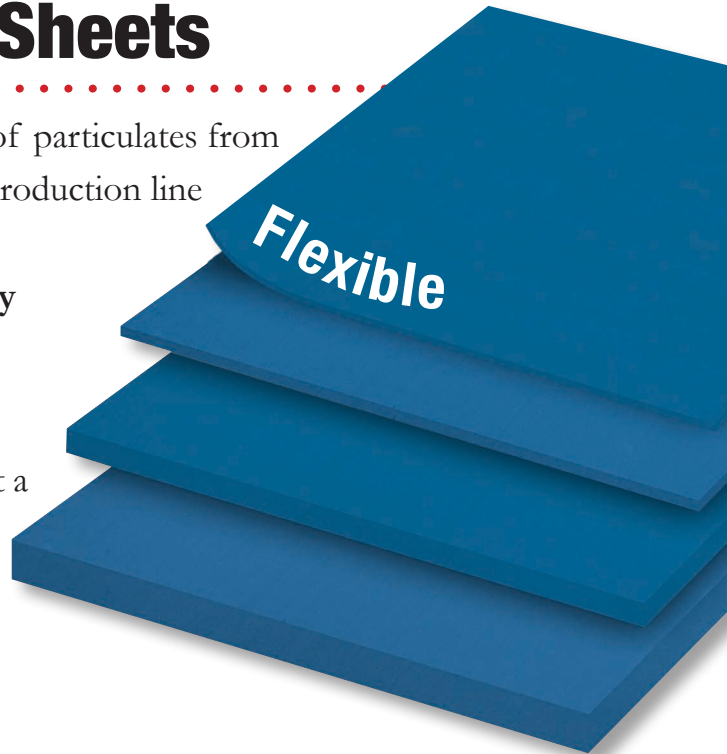

A widespread global concern is the risk of particulates from machinery contaminating foods on the production line causing downtime, waste, and product recalls. Because of this, **The Food Safety Modernization Act** was created.

Although the industry standard is metal detectable; Rubber Fab took their product a step further and created a material that is both metal detectable AND x-ray inspectable, making it the product of choice for your protection system.

Rubber Fab's FDA approved **Detectomer®** brand can quickly and efficiently be detected to prevent contamination. The sheeting can be used as a barrier for protection on conveyor belts or fabricated into gaskets, strips, custom profiles and rubber sleeves to meet your specifications. A self adhesive backing is also available. **Detectomer®** sheets are flexible and will hold that flexibility in temperatures as low as -10°F.

Detectomer® sheets can be molded to meet your specific requirements. With a sheet size of 36" x 36", available in standard stock thicknesses, **Detectomer®** sheets are great for custom shapes and applications.

Contact Rubber Fab's Technical Sales team at 866-442-2959 for all of your application requirements and the unlimited possibilities of **Detectomer®**.
