POWERSFUL, FLEXIBLE, AND SEAMLESS CENTRALIZED LOG MANAGEMENT EXPERIENCE
WITHOUT THE BURDEN OF OPERATIONAL AND INFRASTRUCTURE COSTS.

COMPREHENSIVE
Horizontally scale to meet any size workload from a gigabyte to petabytes per day. Built in fault tolerance enables distributed and load-balanced operations to prevent data loss. Our comprehensive procession algorithm to parse logs and search through virtually unlimited data.

FASTER TIME TO VALUE
Focus on the day-to-day log management activities and maximize value from your resources while Graylog manages the infrastructure, health, and performance of the application. We provide dedicated Cloud environments for each customer, in-transit data encryption, and different options for encryption at rest. In less than two days, you can be live on Graylog Cloud and we’ll take it from there.

EASY EXPLORATION
Graylog lets you analyze data without having to know exactly what you are looking for before querying. Graylog expands and reveals more information as you go, delving deeper into the search results to explore further to find the right answers.

INCREDBLE FLEXIBILITY
Graylog is built to open standards for connectivity and interoperability for seamless collection, transfer, storage, and analysis of log data. We now centrally manage any machine data collector—ours, custom, or 3rd party vendor—from the admin console, including stopping or starting any whitelisted system processes. Not only that, we can collect other structured data as well, such as DNS lookups from the wire.

RIDICULOUS SPEED
When working with enterprise-scale data, every second—or millisecond—matters. The longer it takes to analyze data coming in, the longer it takes to find and resolve issues. Graylog lets you search and investigate multiple issues at once with multi-threaded data retrieval, saving considerable time and delivering results much faster.

VALUE FOR EVERYONE
Make repetitive tasks and routine investigations efficient, ensure consistency, and empower less technical members of the team through dashboards and saved searches.

WE’VE GOT YOU COVERED
POWERFUL, LIGHTNING FAST FEATURES

ARCHIVING
Store older data on slow storage and easily re-import it into Graylog when you need it.

DYNAMIC LOOKUP TABLES
Perform faster research by adding WHOIS, IP Geolocation, threat intelligence, or other structured data.

LOG VIEW
View data in real-time, ensure continued availability, streamline investigations.

REST API
Easily integrate your data into 3rd party systems to automate reporting, workflow and research.

SEARCH WORKFLOW
Build and combine multiple searches for any type of analysis into one action and export results to a dashboard.

CONTENT PACKS
Share configurations of extractors, inputs, pipelines, dashboards and more. Move easily from Test to Production.

FORWARDER
Easily send data to Graylog Cloud or to an on-premise Graylog Server installation.

PARAMETERIZATION
Enter one or more criteria for a more comprehensive search. Easily save and share as templates.

SCALABLE SEARCH
Build complex queries in minutes with Graylog’s web console—no proprietary query language needed.

CORRELATED ALERTS
Receive alerts via email, text, Slack, and more. Update alert criteria based on a dynamic list in a lookup table.

INTERACTIVE DASHBOARDS
Combine widgets to build customized data displays and automate the delivery of reports to your inbox.

PIPES
Set rules for data processing to ensure the right parser, data enrichment and lookup table(s) are applied.

SCHEDULE REPORTS
Leverage Graylog’s dashboard functionality to easily build and configure scheduled reports.

TEAMS MANAGEMENT
Control entity access and capabilities. Includes LDAP/Active Directory integration.

USER AUDIT LOGS
Track who accessed what log data and what actions they took against it to ensure compliance and security.

DYNAMIC LOOKUP TABLES
Perform faster research by adding WHOIS, IP Geolocation, threat intelligence, or other structured data.

SEARCH WORKFLOW
Build and combine multiple searches for any type of analysis into one action and export results to a dashboard.

ABOUT GRAYLOG
Graylog is a leading log management solution that hundreds of thousands of IT professionals across the globe rely on every day. With a focus on security, compliance, operations, and DevOps, Graylog delivers a better user experience by making analysis ridiculously fast and efficient using a more cost-effective and flexible architecture. Purpose-built for modern log analytics, Graylog removes complexity from data exploration, compliance audits, and threat hunting so users can quickly and easily find meaning in data and act faster.
