WHAT MAKES GRAYLOG UNIQUE

**COMPREHENSIVE**
Horizontally scale to meet any size workload from a gigabyte to petabytes per day. Built in fault tolerance enables distributed and load-balanced operations to prevent data loss. Our comprehensive procession algorithm to parse logs and search through virtually unlimited data.

**TREMENDOUS VALUE**
There are many facets to price—licensing, processing, storage, and system maintenance—and Graylog is more cost-effective than others across all of them. Graylog Enterprise is free up to 5 GB/day, and beyond that ingest rate, typically ½ to ⅔ the price of major competitors. And that lower price includes collection of all data across your environment. Throw in our top-notch customer experience from initial conversations to purchase to ongoing technical support and product enhancements, and your value skyrockets.

**EASY EXPLORATION**
Graylog lets you analyze data without having to know exactly what you are looking for before querying. Graylog expands and reveals more information as you go, delving deeper into the search results to explore further to find the right answers.

**INCREDIBLE FLEXIBILITY**
Graylog is built to open standards for connectivity and interoperability for seamless collection, transfer, storage, and analysis of log data. We now centrally manage any machine data collector—ours, custom, or 3rd party vendor—from the admin console, including stopping or starting any whitelisted system processes. Not only that, we can collect other structured data as well, such as DNS lookups from the wire.

**RIDICULOUS SPEED**
When working with enterprise-scale data, every second—or millisecond—matters. The longer it takes to analyze data coming in, the longer it takes to find and resolve issues. Graylog lets you search and investigate multiple issues at once with multi-threaded data retrieval, saving considerable time and delivering results much faster.

**VALUE FOR EVERYONE**
Make repetitive tasks and routine investigations efficient, ensure consistency, and empower less technical members of the team through dashboards and saved searches.
POWERFUL, LIGHTNING FAST FEATURES

ARCHIVING
Store older data on slow storage and easily re-import it into Graylog when you need it.

DYNAMIC LOOKUP TABLES
Perform faster research by adding WHOIS, IP Geolocation, threat intelligence, or other structured data.

INTEGRATIONS
Easily share data with other business-critical systems for full transparency and collaboration.

PARAMETERIZATION
Enter one or more criteria for a more comprehensive search. Easily save and share as templates.

SCALABLE SEARCH
Build complex queries in minutes with Graylog's web console—no proprietary query language needed.

STREAMS
Categorize log messages in real-time to easily target queries, reports and dashboards for faster results.

CONTENT PACKS
Share configurations of extractors, inputs, pipelines, dashboards and more. Move easily from Test to Production.

FORWARDER
Easily send data to Graylog Cloud or to an on-premise Graylog Server installation.

INTERACTIVE DASHBOARDS
Combine widgets to build customized data displays and automate the delivery of reports to your inbox.

PIPELINES
Set rules for data processing to ensure the right parser, data enrichment and lookup table(s) are applied.

SCHEDULE REPORTS
Leverage Graylog’s dashboard functionality to easily build and configure scheduled reports.

TEAMS MANAGEMENT
Control entity access and capabilities. Includes LDAP/Active Directory integration.

CORRELATED ALERTS
Receive alerts via email, text, Slack, and more. Update alert criteria based on a dynamic list in a lookup table.

ILLUMINATE
Start fast with prebuilt content — search templates, dashboards, correlated alerts, dynamic look-up tables, and more.

LOG VIEW
View data in real-time, ensure continued availability, streamline investigations.

REST API
Easily integrate your data into 3rd party systems to automate reporting, workflow and research.

SEARCH WORKFLOW
Build and combine multiple searches for any type of analysis into one action and export results to a dashboard.

TEAMS MANAGEMENT
Control entity access and capabilities. Includes LDAP/Active Directory integration.

USER AUDIT LOGS
Track who accessed what log data and what actions they took against it to ensure compliance and security.

ABOUT GRAYLOG
Log management done right. Deployed in more than 50,000 installations worldwide, Graylog is an award-winning centralized log management solution built for speed and scale in capturing, storing, and enabling real-time analysis of terabytes of machine data. Graylog enables hundreds of thousands of users to explore their data every day to solve security, compliance, operational, and application development issues.

SYSTEM REQUIREMENTS
For a typical installation up to a 5 GB daily ingest volume, we recommend starting with the following requirements:

- 4 CPU cores
- 8 GB AM
- SSD hard disk space with high IOPS for Elasticsearch Log Storage
