

GRAVITY2CM

BY FYB PTY LTD

The FYB Gravity2CM transfers the output from completed Gravity Forms into OpenText Content Manager

Using the FYB Gravity2CM will provide the following benefits:

- ▶ Leverages the investment you have made in Gravity Forms by removing manual capture processes and reducing operational costs
- ▶ Ensures your organisation is meeting its record keeping compliance requirements for the storage and management of documents and records within Content Manager
- ▶ Reduces the duplication of information stored in multiple places, increasing data integrity and providing efficiencies to users for the retrieval of information

What is Gravity Forms?

Gravity Forms is a WordPress plugin that allows site owners, admins and developers to create simple and complex forms to collect information on their WordPress site, and then decide what to do with that information. Gravity Forms can be used for contact forms, WordPress post creation, calculators, employment applications and more.

What is Content Manager?

Content Manager is a governance-based enterprise content document and records management system designed to help organisations manage their business content from creation to disposal.

Version 1.0.X Features

- ▶ Intuitive interface to map Gravity forms to Content Manager folders
- ▶ Completed forms can be capture into a single folder or Gravity form fields can be used to dynamically search for the Content Manager folder to capture the record into
- ▶ Automatically attach an action or workflow to the record in Content Manager

Prerequisites

- ▶ Content Manager 9.4x, 10.x
- ▶ Supports a 32bit or 64bit Content Manager client environment
- ▶ Gravity2CM must be installed on a Content Manager workgroup server
- ▶ .NET Framework 4.7.2 or greater
- ▶ Compatible browsers:
 - Google Chrome
 - Mozilla Firefox
 - Microsoft Edge

Terms and Conditions
