

The FYB Ungerboeck2CM connector enables organisations to capture event information including accounts, contacts and electronic documentation into OpenText Content Manager from Ungerboeck

Using the FYB Ungerboeck2CM connector will provide the following benefits:

- ▶ Automated transfer of metadata and document(s) to Content Manager, removing manual capture processes and reducing operational costs
- ▶ Streamlined records lifecycle processes leveraging the governance, compliance and disposal functionality of Content Manager, reducing risks associated with non-compliance with government and industry requirements
- ▶ Reduces the duplication of information stored in multiple places, resulting in storage cost savings and providing efficiencies to users for the retrieval of information

## What is Ungerboeck?

Ungerboeck is an end-to-end venue and event management software solution.

## Version 1.3.X Features

- ▶ Captures event and associated account, contact and document information automatically into Content Manager
- ▶ Automatically creates a consistent folder structure within Content Manager on creation in Ungerboeck
- ▶ Automatic application of records lifecycle management policies within Content Manager
- ▶ Rebuilds deconstructed emails in Ungerboeck to original email format in Content Manager
- ▶ Ability to retrieve real time information from either system

## Prerequisites

- ▶ Content Manager 10.x, 10.1x
- ▶ Supports a 32bit or 64bit Content Manager client environment
- ▶ Must be installed on a Content Manager workgroup server
- ▶ .NET Framework 4.7.2 or greater
- ▶ Ungerboeck version 20.x

## Terms and Conditions

- ▶ Subscription pricing
