Special Characteristics:

The 2B7 is a two ply monofilament construction designed for applications with a demanding performance and specific cover requirements. The silicone cover offers an FDA compliant cover with high friction, yet excellent release. The belt has the ability to negotiate small pulleys found in packaging and food handling. Good resistance to animal, mineral, vegetable oils and fats. The intermediate layer between the plies is urethane, thus the belt can be single finger spliced without the use of applying a silicone adhesive across the fingers.
