WG Portable Random Search Selector

The WG Portable Random Search Selector allows security personal to set up screening points anywhere, by using a search selector it makes it impossible for anyone to feel targeted as it's the electronics that randomly selects who is to be searched.

The portable unit is designed with full supervisory control, using a key fob programmed specifically for the unit a supervisor can set the percentage to be stopped from 0-99%, read how many stop and pass signals were given and reset the counters.

With its small compact size it is easy to carry the unit, large customisable displays clearly indicate whether the person should be searched or not, additionally an adjustable audible tone will indicate it as well.

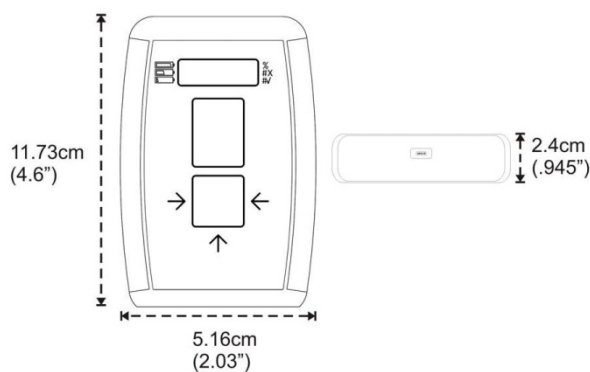

The WG Portable Random Search Selector comes with rechargeable batteries that can be replaced using regular AA batteries if required; a USB style wall charger is provided as well.

LED Display can show solid colours or custom symbols
