WG Blast Container

The WG Blast Container is designed to complement scanning and x-ray equipment.

The WG Blast Container is a cylindrical assembly consisting of composite woven fibres designed to withstand blast and fragments from an explosive device containing up to 500g (16 oz) of PE4.

The Blast Container enables the user to contain a suspect explosive device while awaiting the arrival of a bomb disposal team. The removable inner bag is designed to hold the device in an upright position.

While the datum points on the outside of the bin assist the First Responder/Bomb Disposal Team in scanning and determining the threat and the appropriate action required.

The exterior is fitted with two rubber rings to allow the Container to be easily manoeuvred into position and each unit is coated in a highly visible day glow orange.

The Container consists of three components, the main unit, a detachable base plate (optional) and a removable retaining bag with handles.

STANDARD FEATURES

- Contains at least 227grams of explosives
- Detachable base plate; Removable inner bag
- Can be X-Rayed
- For Post room use
- Easy to roll or transport

SPECIFICATIONS

- Height: 900mm
- Internal Diameter: 517mm
- Outside Diameter: 535 mm
- Wall Thickness: 18 mm
- Weight: 47 kg
