## WG Airport Linear Illuminated Marking System

The Airport Linear illuminated battery powered marking system has been designed for use in low light or dark applications either internally or externally. It enables the user to mark a safe route or to mark a hazard.

The portable system's cable is only 5mm in diameter. The cable emits a brilliant Blue/Green light along its entire length. This colour is highly visible at night and provides the safety and comfort factors inherent in a clear constant reference point. The product range has been developed specifically to accommodate the requirements for both portable and plug in power.

There are three standard illumination colours available, Blue, Green and Red, with Flashing mode as standard.

### APPLICATIONS

#### Airport Applications

- Assisting Evacuation of passengers from aircraft.
- Creating a holding area.
- Fending off i.e. Road traffic accidents.
- Creating a safe path from Aircraft.
- Barrier to prevent passengers walking under wings of aircraft.
