## WG Directional Illumination Marking System

The WG Directional Illumination Marking System allows the illumination to chase along the length of the cable as standard.

Offering the user the following additional capabilities:

- Change the direction
- Control the brightness levels
- Increase or decrease the speed of travel for the illumination

This allows the user to show the rescue team or those being rescued the direction they should be taking and if that needs to be changed you simply press a button on the faceplate. The system has been designed to complement the product range of linear illuminated marking systems which have been designed for use in low light or dark applications either internally or externally.

The portable systems cable is only 5mm in diameter. The cables emit a brilliant lime/green light along its entire length. This colour is highly visible at night and provides the safety and comfort factors inherent in a clear constant reference point. The product range has been developed specifically to accommodate the requirements for both portable and plug in power. There are four standard illumination colours available, these are blue, green, red, lime green and orange.

### APPLICATIONS

#### Emergency services

- Scene of crime
- Accidents
- Hazard marking
- Water rescue
- Confined space search
- USAR
- Recovery and rescue

#### Security and Police

- Scene of crime
- Public order
- Perimeter protection
- Emergency planning
- Roads policing

### APPLICATIONS

#### Construction

- Safe marking of routes in tunnels
- Marking hazards
- Railway maintenance activities

#### Military

- Bridge edge illumination
- Defile marking
- Marking safe routes
- Temporary landing strips

#### CBRNE

- Marking of directional routes
- Cordoning of no-go areas
- Highlighting triage and medical areas
- Search and removal
