## WG Backpack for Hook and Line

The WG backpack has been designed specifically for EOD teams deploying into difficult areas. The backpack is a modular, interchangeable system based around a main pack, smaller side pouches, a series of large and small internal net pouches, and a yoke assembly. Equipment is stored within small Velcro mounted pouches, inside the backpack, for fast identification. The small pouches may be removed, or exchanged in the backpack. Space is available within the backpack, for teams to add their own equipment. Users can customise the backpack and its contents to suit their requirements. Individual requirements can be accommodated, offering optimisation of space and maximisation of usage.

The side pouches can either be attached to the side of the main backpack, or detached and used as a smaller backpack with the use of the yoke assembly. The side pouches come in two styles. The top loading side pouch is a simple side pouch with a zip fastening around three of the sides at the top. It has one large cavity inside. The front loading side pouch has a zip fastening around three edges on the side, to allow easy access to the contents. The interior of this side pouch has a Velcro face to attach small pouches to a face containing numerous elasticated straps to hold small tools and instruments, and a large sleeve.
