WG ASTMF792-08 Step Wedge X-Ray Test Object Case

The WG ASTMF792-08 Step Wedge Test Object Case is used to calibrate and evaluate performance levels of X-ray screening systems in nine distinct test areas using multiple x-ray test pieces.

To meet the need for testing sophisticated X-ray systems, the Step Wedge is manufactured to strictly comply with the FAA, TSA, Transport Canada, and DHS requirements.

We also have the original WG F792-88 10 Step Stepwedge if required, and can build larger kits for vehicle or container screening compliance.

It was developed specifically to meet the enhanced multi test x-ray test standard that essentially replaces the WG F792-88 standard, as well as the WG F792-01 (e2) case.

Each kit is supplied in a rugged custom-designed, injection-moulded case with protective foam block that keeps the Stepwedge in place regardless of the case position.

All of our kits come with a 1-year manufacturer's warranty for defects.
