### Key Features

V50 17 Grain FSP STANAG 2920 Suit & Hand Protection

Includes Chest & Lower Abdomen Blast Plates

Lightweight Suit 15 – 20 kg

Available in Navy Blue

Supplied in Convenient Carry-all Backpack

### Overview

The standard WG 153A Bomb Disposal Search Suit is designed to meet MIL-STD-662F for use by personnel involved in searching for, and clearing, mines and terrorist explosive devices.

Although the Search Suit does not offer the higher protection of the WG 5 EOD Bomb Disposal Suit, it is much lighter in weight, provides all-around 360° protection, whilst at the same time being comfortable to wear and allowing virtually unrestricted movement.

The outer material of the Search Suit is constructed of fire-retardant Kermel and includes the latest Kevlar technology aramid fibres.

The upgraded Search Suit contains pockets into which either ceramic tiles can be inserted in the front or back or blast plates can be attached to the front of the suit, providing protection for the chest and lower abdomen. This significantly upgrades the standard level of protection provided by the Search Suit.

### Features
