

Exposed Wire Standard Test Piece (EWSTP)

Product Code: 1095-36

Key Features

Portable

Fully compliant

Lightweight

Country variants available

Tests all manufacturers' models of both Single and Dual View X-Ray Scanning Machines

Replaces the STP

Overview

The Exposed Wire Standard Test Piece is designed to ensure that the performance requirements for X-Ray Machines as required by the Department for Transport and ECAC are met and maintained. The Exposure of the AWG wires result in clearer definition of the wires on the scanners screen.

The WG EWSTP is manufactured to an exact specification and ready for use in its own case. It can be used on all manufacturers' models of Single and Dual View X-Ray Scanning Machines.

X-ray equipment will deteriorate over time. Regular testing, recording, and reviewing the test data will allow you to identify such deteriorations and rectify them before they adversely impact upon security.

The EU regulations do say that there should be routine testing but do not specify how often the test should be carried out. It is your responsibility to take reasonable steps to ensure your equipment is compliant at all times when in use.

Features

Reliable

Fully compliant with routine X-Ray testing requirements

Can be used to test both Single and Dual View X-Ray Scanning Machines

Lightweight: 4kgs
