

Environmental Policy

Precimeter is a world leading supplier offering sensors, actuators, electromagnetic pumps for molten metal control. It has operations in Gothenburg Sweden and has two daughter companies one in the US and one in Germany. The environmental policy currently only applies to the Swedish company – Precimeter Control AB.

This environmental policy is part of our environmental management system and is the bedrock of all action to decrease the negative environmental impact of our operations and our products but also to boost opportunities for positive environmental work, for instance in our supply and value chain. Precimeter will follow all relevant environmental laws, preventing environmental pollution on one hand and increasing the environmental performance of its products. Responsible for legal compliance and for the environmental management system is Precimeter´s CEO.

This environmental policy is communicated to all employees and the management team is responsible for ensuring that goals, legal rules and various actions and routines are integrated into operations and that concerned employees are informed how it affects them. It is also communicated through various means to external stakeholders and other interested parties.

The employees concerned need to abide by the rules, procedures, and routines. Resources and support to effectively work with the environmental goals and priorities are ensured by the CEO and the management team.

Precimeter has identified prioritized areas to address in its environmental management system.

- Waste reduction: Ensure protection of the environment by prevention of waste generation within our premises and ensure that waste generated are sorted and recycled.
- Educate all the employees, and workers of the company about environmental issues and environmental management systems.
- Travels: Prioritize CO2 efficient means of transportations such as public transport, trains. Where company cars are used action will be taken to provide electrical or equivalent cars.
- Logistics: analyze environmental impacts of our logistical operations and seek to reduce the environmental impact.
- Product design: Overall enhance the sustainability aspects of our products such as improve the environmental design, prolong our product´s life cycle, improve the product´s environmental performance and ensure a higher degree of circularity.

Precimeter will continuously and systematically work with the environmental goals to reduce the overall negative environmental impact. An evaluation of the environmental policy and its linked environmental goals will take place annually. Where improvements lack an action plan will be set up. Responsibility for this rests with the CEO and the management team.
