

AUTOMATED UPDATES

A simple solution for vessel's seeking safe and compliant chart updates.

SEALL'S Automated Updates feature simplifies the weekly update process.

The solution provides navigators with accurate data no matter where they are or what time zone they occupy. The SEALL'S Automated Updates feature will run on standard PCs with interfaces through the PASSAGE PLANNER, ECS, and TAB.

KEY BENEFITS:

- Simple ON/OFF toggle button design.
- Security of the safest and most compliant charts.
- Consistent hourly checks for new data.
- Can be installed by ships staff without interrupting sailing.

MAIN FUNCTIONS:

- Automatically updates back-of-bridge solutions such as PASSAGE PLANNER, ECS and TAB with the most recent updates as soon as they are available on our server.
- Improves communication accuracy by giving ashore and mariners alike the peace of mind that all data present is the latest and safest.
- Improves efficiency by removing the man power and allowing navigators more time to focus on planning and monitoring.
- Is compatible with the UKHO's ADDS program to ensure a consistent and streamline approach to future data requirements.

Note: This feature is available in version 1.3.4 onwards.

Please make sure your software is running the latest version to use this feature.
