About IGS:

Founded in 2013, IGS brought together decades of farming and engineering experience to create an agritech business with a vision to revolutionise the indoor growing market. Its commitment to innovation has continued apace to develop patented vertical farming technology which delivers solutions designed to drive efficiency and create an indoor environment with economy and simplicity at its heart.

IGS launched its Crop Research Centre in Invergowrie, Dundee, in August 2018 and has since deployed to customers across four continents. In November 2021, the business announced the close of its Series B fundraise at a total of £42.2 million.

IGS holds more than 25 granted patents for its unique vertical farming technology, blending science and agriculture by using smart technology to automatically apply recipes to create the perfect environment for crop growth. Currently, more than 250 crops can be successfully produced using a Growth Tower.
