

SAFE BY DENSITY

Safer wayfinding, without invading privacy

Safe is an anonymous, real-occupancy system designed to actively manage occupancy limits, reopen buildings safely, and identify emerging utilization trends at scale.

Safe Display

Show clear wait/go instructions and real-time occupancy across multiple spaces for safer wayfinding. Additional digital signage software is required for deeper customization and added "always on" reliability. Trusted technology and AV partners are available.

Safe Alerts

Keep people informed when spaces reach their reduced capacity limit. Set Density Alerts to help workplace teams take immediate action or even direct occupants to less crowded areas.

Safe Analytics

Surface real-time occupancy data to maximize space while ensuring COVID compliance across your entire portfolio.
