SAFE LINE

Easy Mooring Lines Monitoring and Management Software

Rope health monitoring and management can be easily achieved with the use of our in-house **SAFE LINE** software system, which assesses full management, track line usage and mooring line condition, in order to, reliably and safely, indicate whether the replacement of your mooring lines and tails is necessary, according to MEG4 requirements.

One part of this system of software has the form of a smartphone application that enables easy and flexible implementation of visual inspection on board. The software can also be connected with your company and Black Rope, for a full mooring lines management integration.

Get in control simply and smartly

- Full and easy management for all your fleet's mooring line
- Data report for your mooring lines at any time
- Real-time updates and alerts
- Easy identification of your mooring lines through RFID technology
- Simple and easy visual inspection, with maximum safety, as per MEG4 requirements.

BLACK ROPE offers unique monitoring and management services through our software tools, which are tailor-made according to the demands of the shipping industry and in full compliance with the latest OCIMF regulations regarding MEG4. We can also provide specialized mooring rope consultancy for all types of commercial vessels including Tankers, LNG, LPG, Bulkers, Containerships, Tug Boats and Cruise Ships.
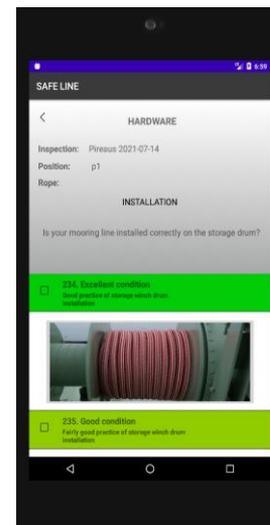

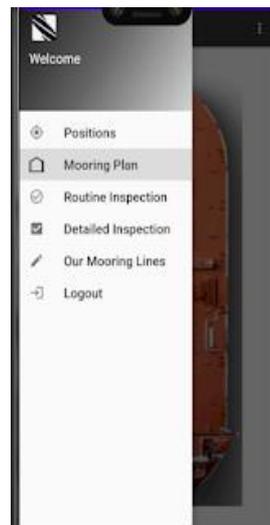

BLACK ROPE's exceptional people assume the responsibility to deliver high quality and innovative solutions regarding your mooring inquiries. Our experts can successfully fulfill all your needs and increase the safety efficiency of every single mooring operation.
