DOORS AND WINDOWS

The Origin Inline Slider

Introducing the Origin Inline Slider:

Your door is the gateway to your life. It connects your world to the one outside, and something as important as that deserves special attention.

That's why here at Origin, our mission is to create exceptionally stunning, uncompromisingly secure and flawlessly crafted products that will enrich the way you and your family live your lives.

By transforming your environment and inspiring your lifestyle, Origin can change the way you interact with the outside world.

All Origin products are manufactured with care, precision and expertise, so you know you're getting something truly special. Every detail is considered and every component expertly engineered.

your widescreen to the world

Our Origin Home range consists of single, French, bi-folding and residential doors as well as windows. All are completely bespoke and constructed from the highest quality materials, by us in Great Britain. What's more, they're guaranteed for years.

The latest addition to the Origin Home range - the Origin Inline Slider - is no exception. It offers a perfect blend of functionality and aesthetics. Made from premium grade

aluminium, it allows for ultra-slim sightlines to be achieved whilst accommodating impressively large glass panels, making it both visually stunning and practically versatile. A sleek, minimalist design perfectly complements your interior space, while being ruthlessly tough in protecting your property and keeping bad weather out.

A modern, architecturally breath-taking update on the

traditional patio door system, the glazed panels slide in front of each other to create an entrance. Over a large aperture, it really is a hugely impressive visual feast. Doors can slide all the way to the left, all the way right or be staged intermittently, providing the ultimate in flexibility. Despite its 20mm sightlines being barely visible, the Origin Slider creates a huge impact in a room, so you enjoy a wall of glass - your widescreen view of the world, configured to work the way you want it to.

Effortless operation...

The Origin Inline Slider doesn't just slide... it glides. Impeccably crafted, our specifically designed running gear means doors pass each other flawlessly, for smooth and dependable operation even after years of service.

Choose from a double or triple track configuration, to stack the individual doors however you want – to the left, right, or in the middle of your space. Wherever they go, a high-quality carriage system and stainless steel runner ensure they get there effortlessly, while perfectly-weighted bearings prevent them moving once they're in place.

Because the concealed tracks blend beautifully into the door frames, they're barely visible. What's more, there's much less chance of anyone catching their fingers or toes in them, whatever age they are.

For an ultra-sleek effect, the track can be recessed into the floor, for a flush finish and transition from the inside to out.*

So, you can open up your doorway to the world, with nothing getting in your way.

The Origin Inline Slider doesn't just slide... it glides.

**allowances will need to be incorporated into the design for drainage.*

Colour that lasts...

Light up your living space. With over 150 RAL shades to choose from, you'll find the perfect colour to complement your environment.

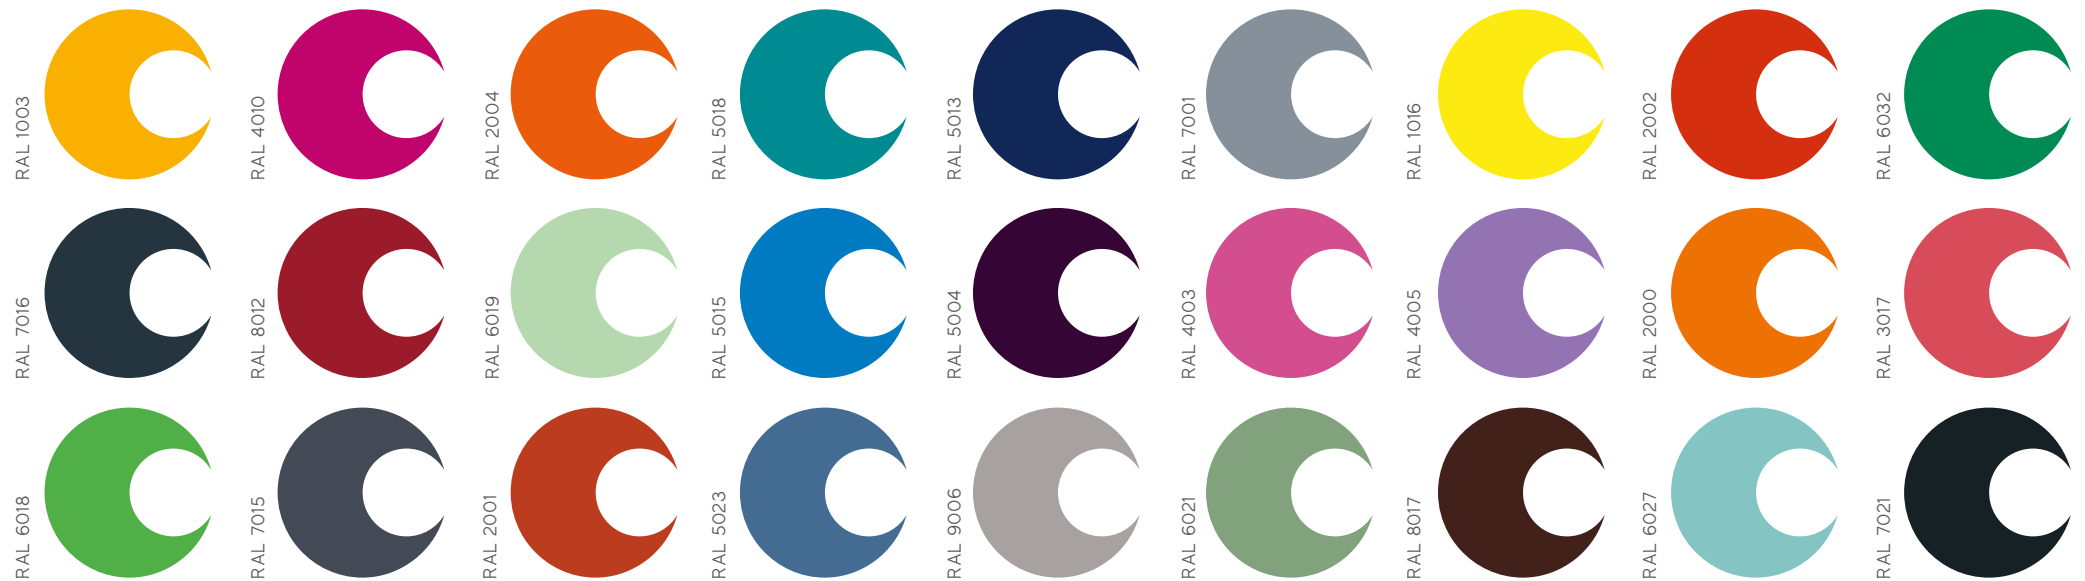

Our most popular colours for the Origin Inline Slider are Anthracite Grey (7016M) and Jet Black (9005M). Offering a sophisticated contrast between the bright, light wall of glass, these darker tones break

up the expanse elegantly whilst highlighting the huge panel sizes that individual doors can be manufactured in.

They also benefit from being on a reduced lead time. But don't let that influence your decision. Origin's extensive palette includes everything from bright primary shades to candy pastels and deeper earthy

tones. So, whether you're a professional interior designer or a complete beginner, we guarantee you'll be inspired. Whatever your taste, building style or colour scheme, we've got something to suit.

The superior finish of the frames is another reason you'll love our doors. They are finished with a beautiful and enduring high-grade powder coating,

*Colours shown here may not be 100% representative.
Visit your local showroom or contact Origin directly for physical samples.*

which is much more environmentally friendly than liquid paint, and it also offers more of a flawless finish as it's sprayed evenly all over. When applied, the powder paint particles are fused together to create a tough barrier, which is just one of the reasons why your doors will retain its pristine looks for years to come... up to 20-years to be precise.*

*Guarantee based on location of where the doors will be installed.

Colour shown here is 9005M.

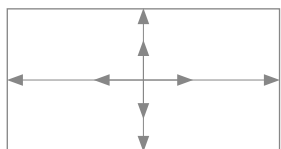

Made your way, to your schedule...

It's your home. It's your door. So your Origin Inline Slider is made just the way you want it.

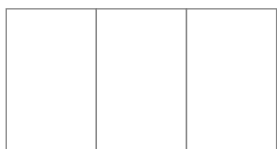

Completely bespoke and tailored to your requirements, you can customise every last detail of your door. Working with us and your chosen Origin Partner, we'll guide you through the personalisation process. It's simple - you'll be able to design your dream doors, we'll expertly manufacture them and your chosen Origin Partner will proficiently install them.

We'll advise you on size, configuration, colour and handle colour, so that together, we can create a door that's tailored to your aesthetic and practical requirements.

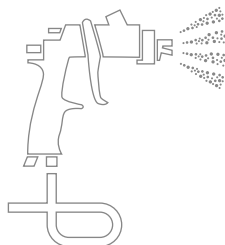

With an impressive maximum panel size of up to 2.2m wide by 3m tall (or 6m² overall), it means that whilst your view and impact is maximised, the number of doors you're required to open is minimised.

Well handled...

Offering an elegant and seamless finish, every Origin Inline Slider is fitted with a streamlined lever handle. Available in four attractive colours, its architecturally striking and aesthetically pleasing design blends effortlessly into the frame while remaining hard-wearing and practical.

Every handle is constructed and manufactured with the same tireless attention to detail and pursuit of perfection that goes into all Origin components. Lock your doors with one simple flip, and relax, knowing your home is safe and protected.

Lock your doors
with one simple flip,
and relax...

Stay safe and sound...

You can't put a price on safety, especially in your home. We take security very seriously at Origin, which is why every Inline Slider is designed to protect the people you love... and keep out the ones you don't.

From a safety perspective, a clever, concealed track prevents fingers and toes from accidentally getting caught. And because the opening action happens on one track, mechanics are simple but effective, reducing necessary security points and making your doors safer. Each door locks solidly into either the jamb or its adjacent door, and is equipped with an ultra-secure multi-point lock with a minimum of six points of locking. Additionally, as there's only a handle on the inside, it means that locks can't be picked from the outside.

The Origin Inline Slider comes complete as a bonded system, meaning the frames come structurally connected to the glass. This significantly reduces any possibility of intruders prying the glass out.

The premium low-e toughened glass used is an incredibly dependable double glazing unit. Constructed of two toughened sheets - 6mm on both the inward and outward facing panes with an 18mm spacer - it makes it tough to break as well as thermally efficient.

On top of this, the frames are constructed from a strong, high grade aluminium.

Therefore, whatever your design and size, you can be confident you're completely protected with Origin.

Strong, secure... and stunning

Extremely strong, yet weighing two-thirds less than steel, Origin's premium aluminium creates the perfect balance between a visually breath-taking and structurally secure door.

As you'd expect, we only use prime billets of aluminium - the very finest cuts to create the finest end product. This gives us better control over its formulation, resulting in its recognisable flawless finish. The quality is clear when you see and touch the materials. Everything works beautifully.

Origin's technical specialists ensure an optimal combination of size and strength is achieved, by engineering an aluminium frame that can accommodate large pieces of glass for superior aesthetics, but without being structurally weakened. Despite sightlines being a minimal (yet impressive) 20mm, door sashes can be manufactured up to 2.2m wide per door without detriment.

Our aluminium delivers benefits you can't see, too. Its innate strength guarantees your doors are physically secure, low in maintenance requirements*, energy efficient and incredibly durable. It's also highly resilient to adverse weather conditions, so you can relax knowing your frames won't flex or warp, even in the harshest of conditions.

Aluminium's versatility lends itself to constructing large, complex door configurations; so whatever you're planning, it can work around you.

*More routine maintenance will be required in certain areas.
See our terms and conditions for details.

Guaranteed for up to 20-years...

At Origin, our expertise lies in the design and engineering of aluminium fenestration products. As a result of the slider coming as a bonded system, we've joined forces with a highly experienced glass manufacturer to enable us to complete the offering. With our combined knowledge and expertise, it means that the product is a match made in heaven.

We searched high and low to ensure that the selected glass manufacturer shared our passion for precision engineering, and rest assured that together, we are committed in creating the very best product for you.

It's this like-mindedness that has enabled us to guarantee your door for up to 20-years*. That includes the frames, running gear, gaskets, seals, levers and locks while the glass serves a 10-year guarantee. It's a promise that truly sets us apart.

Why do we offer this? Because we're so confident in our quality. Every Origin door is meticulously and rigorously checked at every stage of its manufacturing process, for quality control and peace of mind. Our in-house research and development team's persistent focus is on delivering thermally efficient, safe and secure solutions that are continually developed for your benefit.

It's this dedication - obsession, even - that keeps Origin at the forefront of design and manufacturing excellence.

**Guarantee based on location of where the doors will be installed.*

Warm in winter, cool in summer...

A well insulated door makes a world of difference to your home. But Origin's thermally efficient doors take things further.

Every door is thermally broken, so it significantly limits the movement of air between your inside and outside environment. This keeps the heat from escaping and therefore your energy bills down in winter, and your living space refreshingly cool in summer, making the room usable all year round.

We also use low-emissivity glass (low e-coating), which further improves energy efficiency due to the invisible coating that reflects heat back into your room.

Designed specifically to meet the needs of the UK market, every Inline Slider has been engineered to optimise its weather rating, security and visual appeal. Its 1.4 U-Value exceeds British Building Regulation requirements for thermal efficiency, giving you peace of mind whatever your project.

Long life, low maintenance...

In order to give it a flawless finish, our aluminium is coated with the highest grade powder. Because it's cured at 200°C to form a tough, robust coating, its surface is extremely hardwearing yet surprisingly smooth to the touch. It also won't warp, expand or twist, so its alignment will remain consistent year after year. Then, to keep the Origin Inline Slider at its best in terms of looks and operation, it has minimal maintenance requirements.

All you need to do is give it the occasional clean, keep the locks lubricated and the tracks clean, and everything else will look after itself.*

**More routine maintenance will be required in certain areas. See our terms and conditions for details.*

Configurations...

Choosing your very own Origin Inline Slider is easy. Our flexible range of configurations means you'll be able to find the perfect combination of panels for your personal space. If you know your rough opening size, find the nearest opening measurement in the table below and scan down the column to view your possible panel options.

Alternatively, if you're set on a particular number of panels and you are designing your opening around them, select your preferred number of doors in the left column and scan across to identify the opening

sizes available to you. Remember, every panel we make is bespoke and manufactured to your exact sizes and chosen configuration.

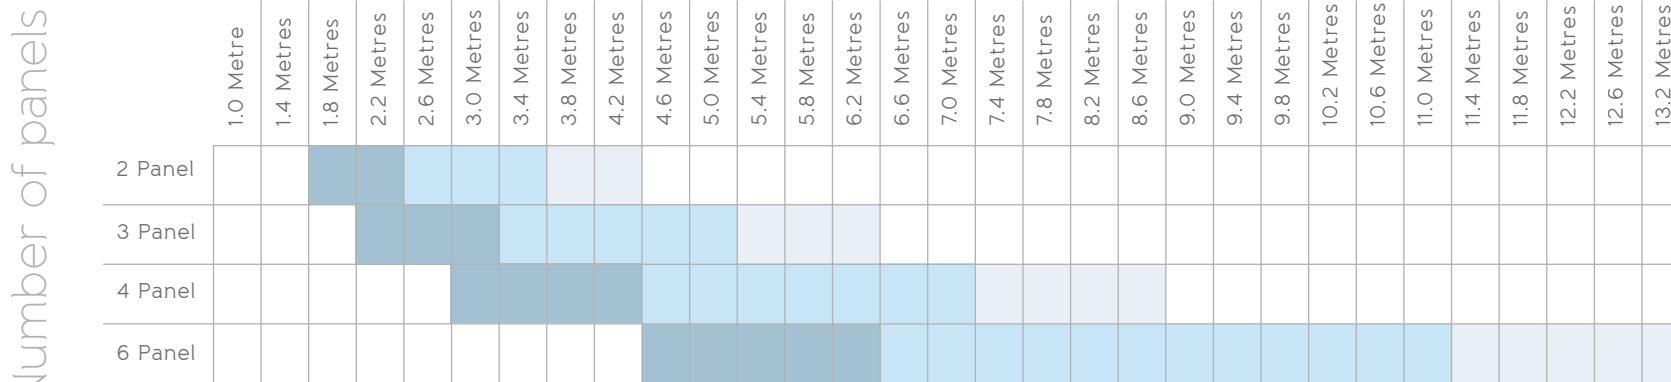

In terms of configurations, some feature doors that all slide, while others are a combination of sliding and fixed. Fixed panes are ideal if you have an object in front of a particular panel, or a lack of space to walk out into.

The Origin Inline Slider is available in everything from a 2-door to a 6-door set. With the maximum individual

door size being able to be made as big as 2.2m per sash, the Origin Inline Slider therefore accommodates apertures up to 13.2m, so we'll invariably be able to offer something to suit most homes. The impressive flexibility of the Origin Inline Slider means you dictate where you want the opening to be. For example, is it easier to access your garden from the left or right side? Or would you want a configuration that opens down the middle? Whatever your requirement, we have something to suit.

The next page will run through the available options.

Configurations continued...

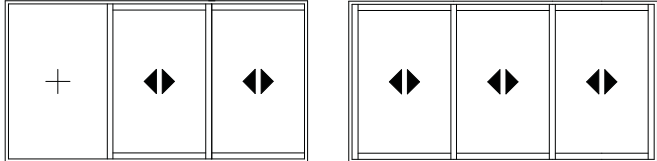

2 doors

Choose to have both doors sliding, or one sliding and one fixed. This configuration is the most traditional patio door style. Its sizing options make it ideal for use in apartments or cottages.

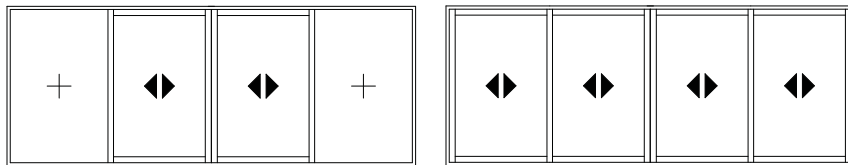

3 doors

Again, you can choose a combination of fixed and sliding doors; either as all sliding, or with two sliding and one fixed. Personalise your arrangement as you wish - you can position the fixed pane either on the far left or far right, whichever suits your space best. Both configurations lock into the jamb, resulting in an incredibly slim 20mm sightline.

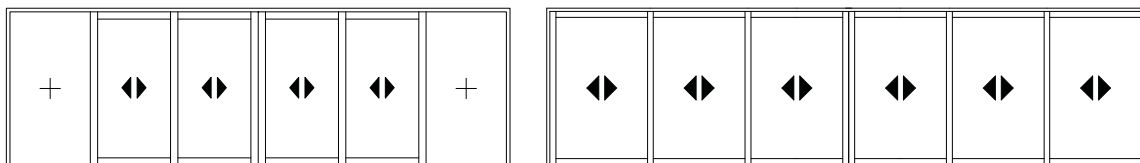

4 doors

For an attractive 4-door configuration, you could opt to put fixed panes on either side of the aperture, and then use the two in the middle to open – a bit like a French door configuration in a sliding door environment. Alternatively, have all four doors sliding. Whichever format you choose, your doors will lock in the middle – so it will be manufactured with the additional interlocking profile.

6 doors

Offering a larger iteration of the 4-door footprint, one configuration includes a fixed pane at either side of the aperture, with four moving doors in the middle. Alternatively, if you prefer, you can also choose to have all six doors as sliders. Both options lock in the middle of the door set, using the interlocking profile.

Things to consider...

Planning permission

Determining whether or not you need planning permission to install your doors depends largely on the type of project you have in mind. If it's simply a matter of replacing old doors with new ones, in a similar size and footprint, then you're unlikely to require any permissions, providing you're not doing it in a conservation area.

However, if your new doors are part of a larger construction project, such as an extension, new build or conservatory, you'll probably need to seek planning permission before you carry out any work.

If you're not sure, check with your local authority before doing anything – to find out if your home is subject to planning restrictions or conservation policies. Origin is here to help wherever possible, and your chosen Origin Partner can guide you through the process and any necessary actions.

Glass and glazing

The glass used within the Origin Inline Slider is a premium quality double glazed unit. Consisting of two sheets of at least 6mm glass, it offers a home protection from intruders as well as the elements. The glass also features a low e-coating to further improve thermal efficiency. Other glass options including solar reflective are also available.

The manufacturer

In our industry, it's often the case that the brand of the product is made by a third-party or fabricator. Therefore, quality can vary drastically, it's difficult to oversee and there's no guarantee that one door won't differ from another.

You'll be delighted to hear Origin is truly different. We keep full control of every product we manufacture, from start to finish. So you know it's made by us, and guaranteed to meet our obsessively high standards.

The Next Step...

Ready to turn your house into an Origin Home? Once you've decided which Origin Inline Slider is right for you, please contact our team using the details on the back page of this brochure.

Our expert customer service team will be ready to answer any question you may have, and can direct you straight to an accredited Origin Partner from there.

All Origin Partners are carefully selected and extensively trained to give you the highest quality products, supported by reliable, helpful service.

Origin is the UK's leading manufacturer of aluminium architectural solutions.

Now award-winning and operating internationally, Origin began in 2001 as a family company dedicated to the design, creation and manufacture of the UK's best quality doors, backed by uncompromising levels of service.

Cousins, Neil Ginger and Victoria Brocklesby, have since worked relentlessly to perfect the design and functionality of bi-folding doors, and to create and maintain the highly respected reputation for quality and service that they have today, while expanding the range to include Residential Doors and Windows.

The introduction of our new Inline Slider provides even more ways to ensure you make the most of every inch of personal space in your home.

As the business has continued to grow and diversify, the foundations of family ethos, pride and ownership in all stages of production firmly remain.
