Nov 15-17

NOTE: Max 10 students per class

Rev 3/23/2021

Course Description: At the heart of the Alerton Building Automation System is the Compass operating software. Using a secure HTML5 web-based graphical user interface platform, Compass is a powerful tool which helps equip building operators with the skills they need to manage their buildings on a routine basis.

Following this course, participants will be able to:

- Understand and identify key features in the Alerton BAS product line and network architecture.
- Create and maintain a User Access database for managing secured access and operating software privileges of all system-users.
- Access the Device Manager feature of the Alerton Compass software to monitor and manage system network operations.
- Understand network addressing standards.
- Develop time schedules in the Compass software to maximize energy savings.
- Understand how the BACnet Priority Array feature impacts system operations.
- Develop and maintain a database of system trend logs for historical reference purposes.
- Develop, maintain and broadcast a database of system alarms monitoring customized operation standards.
- Access the User Activity feature of Compass.

Target Audience: Facilities Operators and Site Technicians who are responsible for the day to day operations of buildings equipped with the Alerton Ascent Compass BAS operating software will greatly benefit from this course.

Commissioning Agents and Design Professionals (Architects/Engineers) may also find the course beneficial in pursuit of understanding how the Alerton BAS system works.

Prerequisite: Class participants should have the Alerton Ascent Compass BAS operating software in use at their facility, or have plans to see it installed in the immediate near future to fully benefit from our CUST-1002 Compass Operator Seminar course.
