

# Step-By-Step

**1.** Brainstorm your design before starting building!

**2.** Make the sleeve or part of the prosthetic that attaches to your leg!

**3.** Use foam block & pop. sticks to make these stands and support your pipeline

**4.** Start to connect pieces going from leg to the ground.

**5.** Figure out a way to take the prosthetic on and off!

## HELPFUL TIPS!!

- We recommend to measure the distance from knee cap to ground!
- Try to address any leaks with the included tape!
- After testing, pour water in your bowl back into the pitcher
- Be creative with your materials and design!
