

COMBUSTIBLE OR FIRE CLADDING REPLACEMENT

The Victorian Government established the Victorian Cladding Taskforce to investigate the extent of non-compliant external wall cladding on buildings State-wide. This list is growing...

Regardless of the size, complexity, value or location of our project, we are ready to respond to client's briefs. Economies of scale, supply chain relationships and strategic procurement models allow us to drive significant value for our customers.

We have worked with several Body Corporate Managers, Committee Members, Local and State Governments to replace non-compliant external wall cladding.

One of our preferred products is Alfrex Solid – AS 1530.1 certified non-combustible 3mm Pre-Finished Aluminium Panel. Alfrex Solid is constructed from 100% Aluminium, rather than combustible polyethylene and fire-retardant mineral such as typical Aluminium composite materials (ACM). BCA compliant as a Deemed-to-satisfy (DTS).

*Has a Building Notice been issued by your
Local Council or the Victorian State wide Cladding Audit?*
