

A manufacturer of quality labeling machinery

Inc.

# Series Six Print & Apply Label Applicators

This is a versatile Printer / Applicator that will integrate with all major brands of print engines. The applicator is operated by a PLC. With a simple program change, the labeler may either print labels on demand or in batch mode. The labeling head may be configured for a wide variety of applications. These configurations include tamp apply, blown-on, tamp/blow, swing tamp, multi panel tamp, and our unique cage style application device allowing long narrow labels to be applied directly to the side of a product. A complete compliment of options is available to include an alarm package, and detection devices.

Success

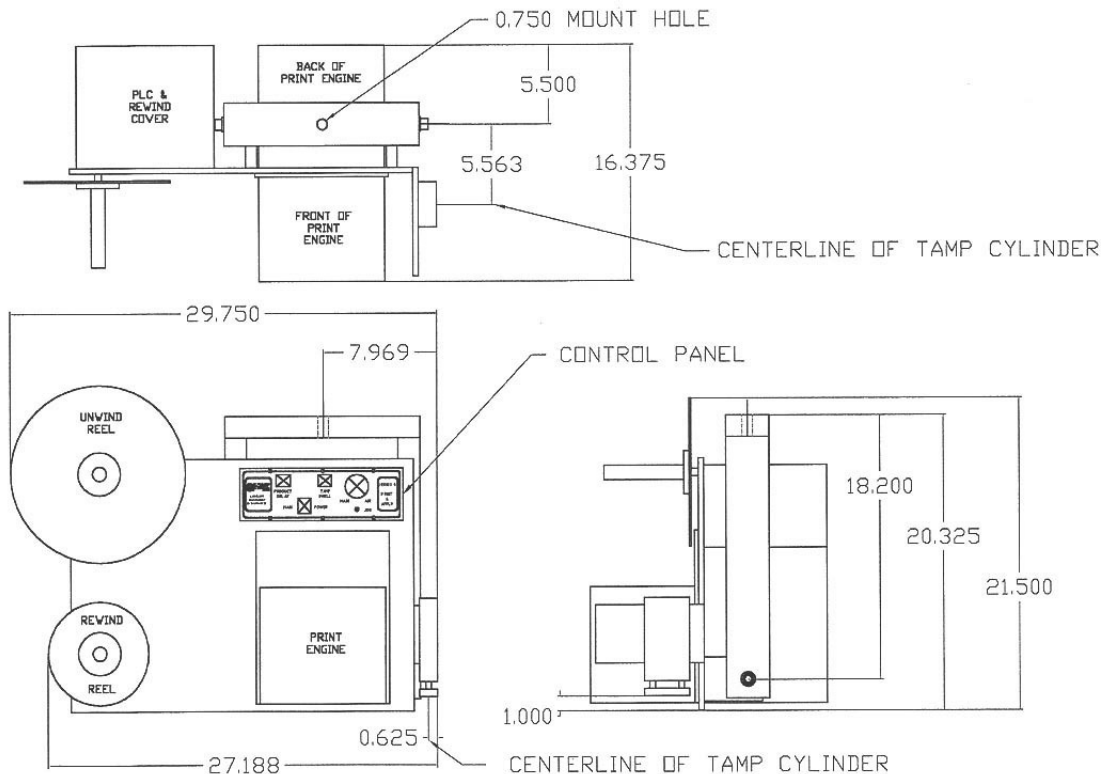

# Standard Features

- U arm style mounting that allows the labeler to be mounted from the top, bottom or side of the product.
- 12" O.D. tension controlled label unwind / supply reels.
- Rewind motor with adjustable tension control.
- Push button controls for product delay and tamp dwell. These controls allow for ease of set up and operation.
- The applicator is PLC controlled. An expanded device is used to allow for the simple integration of an alarm package or external triggers.

# Available Options

- Complete alarm package to include: End of label, Approaching end of label, Printer out of ribbon and Low printer ribbon. This package includes an amber and red alarm light.
- Upgrade to larger label unwinds and wider web widths.
- Swing tamp kit for front and multi panel applications.
- Can be linked to bar code readers and data acquisition systems.
