

MOOV Leisure

Controlled access and
a hearty welcome

Can a welcoming atmosphere and access control go hand in hand?

As the manager of a camp site or holiday park, you no doubt want to make every effort to ensure that your guests have as pleasant a stay as possible. In this respect, heavy vehicle traffic, unsafe situations and unwanted visitors on the grounds do not help. It is therefore logical that many recreation companies would like to be able to control the vehicular access to the grounds.

Installing a gate or a boom is a good solution, but as a manager, you don't want to spend all your time operating them. The park must be also easily accessible for emergency services, and guests should not have to wait in front of a closed gate.

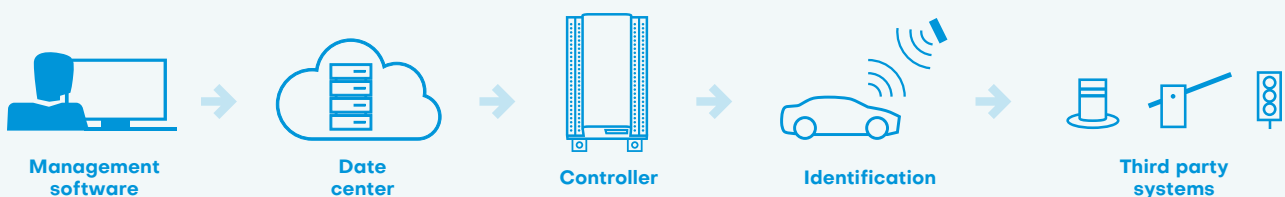

What if there is already a solution that automates the entire process?

Discover MOOV Leisure

MOOV Leisure is an effective, user-friendly solution that helps leisure companies to manage and implement selective vehicle access to camp sites or holiday parks. The MOOV software makes it easy for leisure companies to manage the access policy of their choice, and the MOOV hardware controls the barriers that are connected to the system. The platform has been specifically designed for use in a recreational environment, so all of the practical processes have been carefully considered.

How it works

Why leisure companies choose MOOV Leisure

A fitting method of identification for vehicles of every kind

The MOOV solution is compatible with practically every form of identification technology, and more than one of them can be combined at a single site. For example, licence plate recognition can be used to admit guests, a pass can be used for employees and special 112 transponders can be used to guarantee access for emergency services.

Connection to existing reservation systems

Most holiday parks already work with a system in which reservations are recorded. Many of these applications can also record vehicle data, such as license plate numbers. Therefore, we have developed a link that connects our system to the most common booking systems in the recreational sector. This way, users do not have to enter the same information in two places, which saves precious time.

Insight anytime, anywhere

Because MOOV is a cloud-based solution, as an administrator you have insight into what happens at the booms, anytime, anywhere. You can operate the system manually through the software, remotely if necessary, and you can see at a glance whether or not a vehicle is on the premises.

The MOOV solution is compatible with practically every form of identification technology, and more than one of them can be combined at a single site

Is your reservation system not yet connected? No problem. We will gladly help you establish the connection.

Do you want a controlled, welcoming reception, just like over 300 other
