

LABORCHART

solves project request
challenges for mid-size
mechanical contractor

THE PROBLEM

A Utah-based mechanical contractor was having trouble communicating and following through on project requests. Labor requests were recorded on yellow legal pads or made during conversations on jobsites. There wasn't a central system for tracking labor for each project. As a result, requests were being dropped and overtime was spiking.

The mechanical contractor needed more information about its labor pool, a way to automate project requests to avoid down time and layoffs as projects scaled up and down. They needed help aligning decisions between the office and the field.

LaborChart helped this mid-sized mechanical contractor bridge the gap.

THE SOLUTION

The mechanical contractor integrated its enterprise resource planning software with LaborChart for real-time, digital tracking of certifications. When new employees were hired, their information was readily available in the digital system. They also created customized fields to reflect the specific expertise of its labor pool to ensure the right mix of skills sets and experience on each project.

The mechanical contractor moved from yellow legal pads to digital tablets in the field. The improved connectivity aided in communication by instantly alerting the field about project requests and labor transfers.

COMPANY OVERVIEW

HEADQUARTERS:
**Utah,
United States**

COMPANY SIZE:
250 employees

COMPANY TYPE:
**Mechanical
Contractor**

The 250-employee mechanical contracting firm based in Utah, works on design-build mechanical and plumbing projects throughout the Western United States.

THE RESULTS

The mechanical contractor uses LaborChart to track the start and progress of each project and generates a monthly report with a clear picture of their labor pool attached to each job. The field and office both have a boost in confidence that requests will be filled and certifications will be renewed.

LaborChart enabled the mechanical contractor to break the cycle of hiring and firing by improving forecasting. Accurate, up-to-date information ensures the right personnel is where they need to be at the time they need to be there.
