

MMC

Mechanical contractor selects **LaborChart** as workforce management solution

THE PROBLEM

Since launching in 1932, MMC Contractors has grown into one of the largest and most influential mechanical contractors in the country. The Kansas City-based company used whiteboards for decades before transitioning to spreadsheets. And now, in the midst of overhauling its accounting software, the team was considering another shift — cloud-based labor scheduling. Project managers were wasting time updating and maintaining labor documents. The process was clunky, adding layers to communication between the office and field.

MMC was hesitant to overwhelming their staff with new technology, but they knew a change had to be made. They needed a tool they could have at their fingertips. They needed LaborChart.

THE SOLUTION

MMC and LaborChart created a plan that was tailored to the company's workforce. MMC focused on small user groups to ensure key people had critical knowledge of how the platform worked before opening it up to a majority of the team. LaborChart provided continuous implementation support to help with training. As part of the plan, MMC integrated Viewpoint with LaborChart to sync information and allow superintendents to instantly update projects in the field without having to create an email chain. MMC could now assign permissions based on roles and responsibility levels.

THE RESULTS

LaborChart's dashboard simplified the day-to-day management of projects by showing changes in real-time and letting superintendents balance the needs of current and future jobs. The platform also helped align expectations across multiple departments and eliminated the extensive process of continually tweaking spreadsheets.

"LaborChart is an easy-to-use database of our day-to-day activity. And, a benefit we never imagined was our Safety Department using the platform to store certifications and training in each worker's profile."

- Erika Laney, Labor Coordinator

MCC also realized an unexpected benefit with regard to safety. The company's safety department utilizes LaborChart for tracking safety requirements and trade certifications. The safety team is now able to easily manage certification updates and quickly determine who is a fit for any given job.
