

SPRIG ELECTRIC

Electrical contractor saves over \$80,000
a year with **LaborChart**

THE PROBLEM

Sprig Electric had design-build projects across Silicon Valley; but the information about those jobs was tethered to a set of big magnetic boards at their corporate headquarters in San Jose, California. With as many as 700 people being managed at one time, there were a number of project changes and assignments the electrical contractor had to keep up with. They had to manually update their board in the office or on a companion board at the job site. They were wasting time physically updating boards every week.

The magnetic boards were used in conjunction with safety software and a separate platform for payroll and the active employee roster. Sprig Electric was searching for a hub, a central database that could show the true cost of each project and remove unnecessary steps from labor scheduling.

THE SOLUTION

LaborChart's cloud-based platform helps unify Sprig's field and office teams, but it was the support and product updates that transformed Sprig's labor scheduling process. After receiving feedback from Sprig about possible platform improvements, LaborChart added workforce reports. Sprig could now pull data from each job on separate pages resulting in numerous hours saved every week. To help their superintendents adopt the new technology, Sprig provided individual demonstrations to show the benefits of LaborChart.

COMPANY OVERVIEW

HEADQUARTERS:
San Jose, California
United States

COMPANY SIZE:
1,100 employees

COMPANY TYPE:
Electrical Contractor

Sprig Electric is a Silicon Valley-based electrical contractor specializing in design-build services for electrical, low voltage, controls, fire & life safety and energy solution systems. Sprig was founded in 1970 with a commitment to exceed expectations in customer satisfaction, craftsmanship and safety.

THE RESULTS

With LaborChart, Sprig can now update projects from their home or job site and eliminates the need for a weekly visit to the office to manually update the job board. The electrical contractor also uses assignment alerts to tell foremen when apprentices are in class or rotating through disciplines. The push notifications replaced a cumbersome system that required calendar notifications and individual emails about the status of each apprentice in the field.

LaborChart empowers Sprig to complete value-stream mapping analysis to gain a full understanding of labor costs from start to finish.

“LaborChart really does understand the industry and clearly works to keep learning from customers like us.”

- Nicole Rolley, Field Administrator

Today, instead of wasting roughly two hours per week on manual board updates, superintendents and the administrative team now have more time to oversee complex jobs and identify potential issues in the field.
