

Manufacturer's Declaration

Compatibility of Tigo Technology with Wolong Inverters

The declaration covers the following Wolong inverter models.

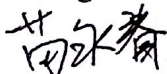

- ◆ WLKS series
- ◆ WLKT series

All the above inverter models are compatible with PV modules with integrated Tigo Smart jbox, so called "Smartmodules" as well as Tigo Retrofit Add-On Maximizers. The design of a solar power system will ensure that PV modules integrated with Tigo Optimizers meet Wolong inverter operating parameters under all working conditions.

Warranty claims are contingent on the following:

1. The maximum operating DC voltage and current of the system do not exceed the limits of the inverter at any time.
2. Wolong takes no responsibility for the achieved yield of the power system because the MPP tracking of the inverter no longer controls the operating of the PV panels.
3. Wolong does not take any responsibility for the performance of the Tigo products.
4. Wolong assumes no responsibility for the PV system's compliance with EMC and other local regulations.
