

## **AURUS INVERTERS: COMPLIANCE WITH TIGO ENERGY TECHNOLOGY**

Manufacturer: Telwin Spa – Valenia Photovoltaic Inverters Division  
via della tecnica 3  
36030 Villaverla (VI)  
Italy

confirms that the whole Aurus inverters range:

AURUS 20 (1,7 kW)  
AURUS 30 (2,5 kW)  
AURUS 40 (3,4 kW)  
AURUS 50 (4,2 kW)  
AURUS 62 (5,1 kW)  
AURUS 82 (6,0 kW)

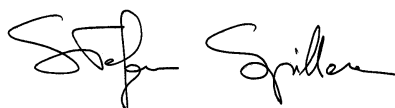

is compatible and can be used with the smart module platform from Tigo Energy. This includes both Tigo's retrofit solution and any Smart Module using Tigo Energy's embedded technology.

As long as the system is within Valenia's stated operating and installation conditions, the use of Tigo Energy technology does not void the manufacturer's warranty. Operating ranges and installation specifications of Aurus inverters are documented in Valenia's data sheets and instruction manuals.

Warranty claims are contingent on the following:

- 1-The maximum input voltage of the Aurus inverters is not exceeded at any time by the operation of the Tigo technology.
- 2-Valenia is not responsible for the compliance of the complete system in terms of EMC regulations.
- 3-Valenia is not responsible for the total energy yield of the PV system because the MPP trackers of the inverters no longer control the operation of the PV modules.
- 4- Tigo Energy has approved the operation of its products with Aurus Inverters.
