Market Overview

Amid the challenges of sustained inflation, broken supply chains, geopolitical conflict, slowing domestic growth, strained housing markets, and aggressive global central-bank action, historical index returns are being rewritten to the downside. The blunt response of the Federal Reserve (Fed) has confirmed its resolve to lower inflation via increasing rates, even at the risk of a recession and declining demand. As the Fed attempts to not repeat previous reactive policy responses over the last 50 years, it may be ignoring what the markets and numerous economic inputs have been indicating.

Real gross domestic product (GDP), as reported by the Bureau of Economic Analysis, declined for the second quarter of 2022 by 0.6%. This marks the second consecutive quarter of negative GDP prints. Real disposable income (personal income adjusted for taxes and inflation) decreased by 1.5%, along with the personal savings rate. With consumer spending accounting for nearly 70% of GDP, negative changes in consumer behavior are noteworthy. Furthermore, gross domestic purchase prices (the prices of goods and services purchased by U.S. residents) increased 8.5% in the third quarter. Additional economic headwinds include domestic home prices and new home starts battered by a historic increase in mortgage rates. Per the St. Louis Fed, the 30-year fixed-rate average mortgage in the U.S. at quarter-end was nearly 7%. The last time mortgage rates were over 7% was 20 years ago. While still above recessionary levels, both the Institute for Supply Management Manufacturing PMI and Services PMI contracted over the quarter, indicating potential headwinds on a granular level. Details within the monthly ISM reports reference headwinds, including managing employee headcount, navigating supply-chain disruptions, and pricing-power concerns. However, at this point, employment has remained broadly insulated. The national unemployment rate is 3.7%, but we are seeing limited wage growth pressure.

To squash elevated inflation, central banks have been responding in a coordinated fashion via increasing key interest rates. The Bank of England (BOE) recently raised its rate by 50

basis points to the highest level in 14 years. This marks the seventh straight rate move higher by the BOE as it tries to balance borrowing costs with rising food and energy prices. The European Central Bank (ECB) greeted markets with a 75-basis-point hike for the 19 countries that are Euro dependent, along with a commitment to continue on its rate tightening path. Not to be excluded, the Reserve Bank of Australia and the Bank of Canada both implemented robust increases over the quarter.

Stateside, the theme of elevated inflation fed by an imbalance between supply and demand, and supply-chain deterioration remained top of mind in several of Fed Chairman Jerome Powell's recent comments. Chair Powell has acknowledged that the Fed's goal of engineering a "soft landing" (where it would be able to slow growth and reduce the worst inflation in the last 40 years without triggering a recession) is becoming more unlikely. What is gravely concerning is that a blunt instrument is being used in hopes that its results are surgical. To this point, Chair Powell stated, "No one knows whether this process will lead to a recession or, if so, how significant that recession would be." "We have got to get inflation behind us," Chair Powell said. "... I wish there were a painless way to do that. There isn't." In September, the FOMC has performed its third straight 75-basis-point rate hike, leaving the short-term key rate at 3-3.25%—its highest level since 2008. Additional rate hikes have been projected over the remaining months of 2022 that may bring the year-end rate closer to 4.5% (100 basis points higher than the June projection for year-end levels) with further hikes expected in 2023. Notably, for the Fed to halt its rate advancement, Chair Powell said he would have to see "continued slow growth, a modest increase in unemployment, and clear evidence that inflation is moving toward the 2% target."

Markets continued to undergo a repricing through the previously mentioned challenges. Risk-based assets, as represented by the S&P 500 Index, returned -4.89% in the third quarter and -23.88% year-to-date. Fixed-income markets have continued to be battered by persistent rate volatility. The

return of the investment-grade bond market (represented by the Bloomberg US Credit Index) was markedly negative for the quarter and year, returning -4.95% and -18.07%, respectively. The high-yield bond market (represented by the Bloomberg US Corporate High Yield 2% Issuer Cap Index) has performed better in the third quarter, returning -0.64% but -14.73% year-to-date. The short end of the yield curve (represented by the two-year U.S. Treasury bond) continued to steepen as the Fed increased rates, rising 120 basis points and ending the period at 4.12%. Meanwhile, the long end of the curve (represented by the 30-year U.S. Treasury bond) moved 59 basis points, ending at 3.73%. The 10-year U.S. Treasury yield ended the quarter 69 basis points higher, ending at 3.67%.

Asset Class Overview

The floating-rate loan asset class (represented by the Credit Suisse Leveraged Loan Index or CSLL Index) returned 1.19% in the third quarter. This reflects a strong reversal from the first and second quarterly returns of -0.10% and -4.35%, respectively. While not positive year-to-date, the CSLL Index has returned -3.31%, proving to be far more resilient than most fixed-income asset classes. To compare, U.S. credit and U.S. high-yield bonds have returned -18.07% and -14.73% year-to-date, respectively. And the 30-Year U.S. Treasury has returned over -30% -year-to-date.

Even amid waning retail demand, the potential for rate hedging and diversification that the asset class has historically provided has remained in place. Additionally, investors are now be greeted with a compelling yield offering. As measured by the 4-year effective yield, the CSLL Index currently offers investors a yield of 9.77%, with a coupon of nearly 7%. As investors weigh the impact and likelihood of a potential recession and slowing growth, the loan asset class has suffered significant retail outflows. This asset-class pressure has been countered by a lack of loan issuance and steady collateralized loan obligation (CLO) origination acting as technical supports. The value of assets under management at U.S. ETFs and mutual funds has fallen nearly \$20 billion since May's global market selloff (per

LCD and Lipper), resulting in a positive inflow of approximately \$2 billion year-to-date. Per J.P. Morgan, institutional loan issuance in the third quarter was only \$24 billion, the lowest since the first quarter of 2010. Institutional loan issuance year-to-date has totaled \$204.9 billion or \$145.1 billion ex-refi/repricing, which compares to \$642.1 billion (-68%) and \$276.4 billion year-to-end 2021 (-48%). Yet the CLO primary market has continued to function as a buoy, printing \$105.1 billion year-to-date (down about 20% vs the record year of 2021). We believe the lack of issuance coupled with CLO origination will remain supportive of the asset class.

The average price of the CSLL Index ended the quarter at \$91.60, only .06 cents above the year's low of \$91.54 on July 6. For the quarter, higher-quality credits strongly outperformed lower quality with BB, B, and CCC rated issuers returning 2.29, 1.05%, and -1.62%, respectively. Performing loans (over \$90 price) vastly outperformed distressed loans (up to and including \$90 price), returning 1.62% versus -2.05%, respectively. Top-performing sectors for the quarter were food and drug (3.61%), aerospace (3.06%), utilities (2.93%), energy (2.92%), and housing (2.10%). Meanwhile, the worst quarterly returning sectors included metal/minerals (-3.19%), consumer durables (-1.22%), IT (-0.06%), chemicals (0.34%), and gaming/leisure (0.57%). According to J.P. Morgan, leveraged-loan default rates (including distressed exchanges) ended the quarter at 1.63%. J.P. Morgan has forecasted a 2022 year-end loan-default rate of 1.75% and a 2023 default rate of 2.75% (50 basis points higher than previous forecasts). While elevated, these projections indicate a lack of material stress in corporations at this time and are well below the longer-term average default rate of 3.10%.

Fund Performance

Pacific Funds Floating Rate Income (Class I-2) returned 1.40% versus the Credit Suisse Leveraged Loan Index return of 1.19%.

Portfolio Review

For the third quarter of 2022, the fund outperformed the benchmark due to security selection and an overweight to

Past Performance is not indicative of future results. Returns reflect reinvestment of dividends/distribution. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. performing second-lien loans. Security selection within information technology, healthcare, gaming and financials were contributors to performance. The fund's lack of exposure to metals/minerals and consumer durables, as well as overweight to aerospace and packaging, contributed to performance. Underweights to and security selection within media/telecom and services detracted from performance. Credit-quality allocations were negative, driven by an underweight to loans rated BB and above, but was partially offset by an underweight to distressed (CC, C and default) securities. While the fund was overweight CCC rated issuers, the concentration was in performing second-lien loans, which contributed to performance. Exposure to high-yield bonds detracted from performance. The fund's focus on larger and more liquid issuers, generally greater than \$1 billion in facility size, contributed to performance. Facility/issue sizes greater than \$1 billion returned 1.22% versus facility/issue sizes less than \$300 million returning 0.38%.

Manager Outlook

Floating-rate senior loans continued to be among the best performing asset classes this year amid a rising interest-rate backdrop. The coupon of the asset class as represented by the Credit Suisse Leveraged Index as of quarter-end was over 6.5% and could climb higher by year-end if the Federal Reserve continues to aggressively fight inflation by increasing the federal funds rate. For context, the coupon of the asset class

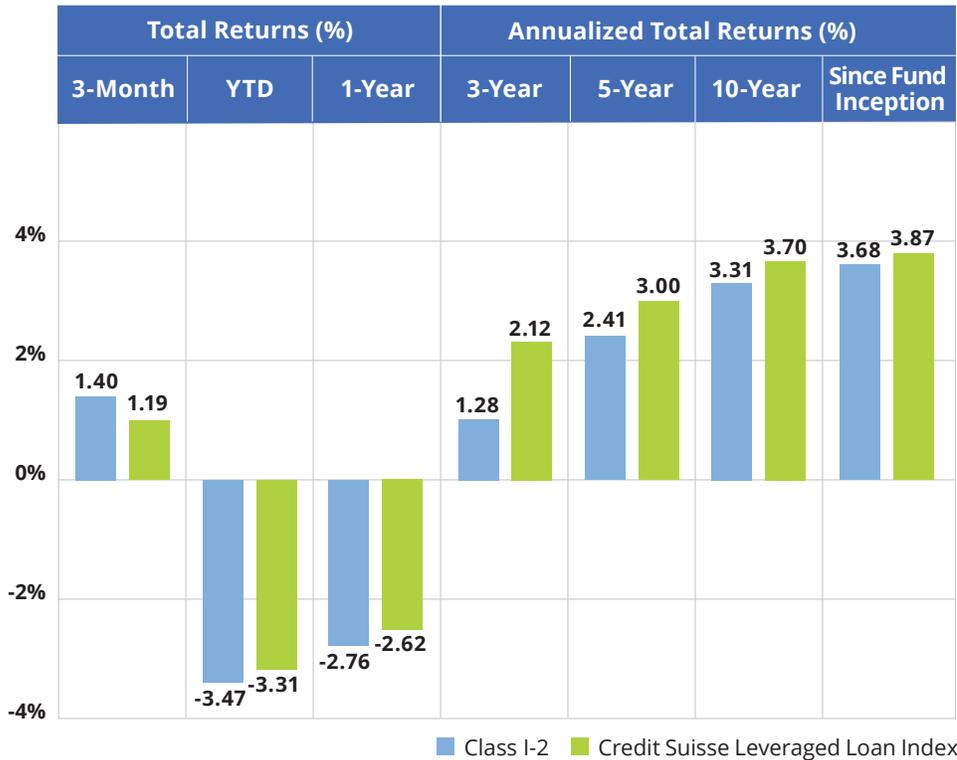

started the year at 4%. The 4-year discount margin of the benchmark ended the third quarter at 602 basis points, representing an effective yield of approximately 10%. Implied annual default rates, using the historical average of excess spread and recoveries, stand at approximately 7%. From an asset-demand perspective, loan retail mutual fund flows experienced outflows of \$13 billion during the third quarter amid growing recessionary concerns. Collateralized loan obligations (CLOs) issuance slightly slowed in the third quarter to \$34 billion, bringing year-to-date issuance to \$105 billion.

We are overweight forest products/containers, information technology, and healthcare, while remaining underweight in media/telecom, food/tobacco, chemicals, and utility. We continue to favor many issuers within financials (insurance brokers) and information technology (software). We believe insurance companies may continue to exhibit an ability to perform well in both good and bad economic environments. We also believe software companies may continue to benefit from the stability of their subscription-based business models, as well as a favorable tailwind from the recent work-from-home dynamic. We emphasize less-cyclical industries and businesses with domestically focused revenues. We are underweight distressed CCC rated loans, with our CCC exposure largely concentrated in performing second-lien loans.

Definitions

One **basis point** equals 0.01%.

The **Bloomberg 1-3 Year US Government/Credit Bond Index** is a performance benchmark of U.S. investment-grade government and corporate bonds with maturities of one to three years.

The **Bloomberg Asset-Backed Securities (ABS) Index** is the ABS component of the Bloomberg Barclays U.S. Aggregate Index that measures the performance of ABS with the following collateral types: credit and charge card, auto and utility loans. All securities have an average life of at least one year.

The **Bloomberg Short Treasury Total Return Index** is a performance benchmark of all U.S. Treasuries that have a remaining maturity between one and twelve months.

The **Bloomberg US Aggregate Bond Index** is composed of investment-grade U.S. government bonds, investment-grade corporate bonds, mortgage pass-through securities, and asset-backed securities, and is commonly used to track the performance of U.S. investment-grade bonds.

The **Bloomberg US Corporate Bond Index** includes publicly issued U.S. corporate and specified foreign debentures and secured notes that meet the specified maturity, liquidity, and quality requirements.

The **Bloomberg US Credit Index** measures the investment grade, US dollar-denominated, fixed-rate, taxable corporate and government-related bond markets. It is composed of the US Corporate Index and a non-corporate component that includes non-US agencies, sovereigns, supranationals and local authorities.

The **Bloomberg US Corporate High Yield Bond Index** measures the USD-denominated, high yield, fixed-rate corporate bond market.

The **Bloomberg US High-Yield 2% Issuer Capped Bond Index** measures the performance of high-yield bonds with a 2% maximum allocation to any one issuer.

The **Credit Suisse Leveraged Loan Index** is designed to mirror the investable universe of the U.S. senior secure-credit (leveraged-loan) market.

Duration is often used to measure a bond's or fund's sensitivity to interest rates. The longer a fund's duration, the more sensitive it is to interest-rate risk. The shorter a fund's duration, the less sensitive it is to interest-rate risk.

The **ISM Non-Manufacturing Purchasing Managers' Index (PMI)** (also known as the **ISM Services PMI**) report on Business, a composite index is calculated as an indicator of the overall economic condition for the non-manufacturing sector.

Option adjusted spread (OAS) is the measurement of the spread of a fixed-income security rate and the risk-free rate of return.

The **S&P 500 index** is a market capitalization-weighted index of 500 widely held stocks often used as a proxy for the U.S. stock market.

Yield to worst is the lowest potential yield that can be received on a bond without the issuer actually defaulting.

PACIFIC FUNDS
FLOATING RATE INCOME
COMMENTARY

SEPTEMBER 30, 2022

Investing involves risk. Principal loss is possible. The Fund is subject to liquidity risk (the risk that an investment may be difficult to purchase, value, and sell particularly during adverse market conditions, because there is a limited market for the investment, or there are restrictions on resale) and credit risk (the risk an issuer may be unable or unwilling to meet its financial obligations, risking default). High-yield/high-risk bonds ("junk bonds") and floating-rate loans (usually rated below investment grade) have greater risk of default than higher-rated securities/higher-quality bonds that may have a lower yield. The Fund is also subject to foreign-markets risk.
