

Accelerate Your ServiceNow ITOM or DevOps Roll-Out with RapDev

Your ServiceNow implementation has the potential to transform your company for the better. In an environment where internal changes such as achieving true DevOps capabilities can be a huge boost to your productivity, there's real value in maximizing your ServiceNow usage.

RapDev helps with two distinct kinds of ServiceNow use cases:

ServiceNow ITOM

- ✓ With progressive features such as a modern configuration management database (CMDB), your ServiceNow ITOM products can deliver maximum value in a DevOps and Infrastructure-as-Code world.
- ✓ You have multiple options regarding how you get the most from your ITOM suite. These range from a two-day on-site workshop to in-depth roll-out assistance based on event-based discovery.
- ✓ RapDev has already rolled out the full ServiceNow ITOM Product Suite for over 30 companies globally and brings this experience to every implementation.

ServiceNow DevOps

- ✓ To get the maximum benefits from DevOps, slowing down developers is not an option. If you roll out the ServiceNow DevOps module successfully, the automated change management features can save your team hundreds of productivity hours.
- ✓ This roll-out can be customized to meet your needs. You can invest in a quick-start deployment or use of the ChatBot program to get up to speed with ChatOps.
- ✓ RapDev is a Premier ServiceNow Partner, which means we understand the best way to roll out ServiceNow DevOps, leveraging ChatOps concepts to accelerate change.

When you work with RapDev on your ServiceNow implementation, you don't just get ServiceNow, **you get the most out of ServiceNow.**
