

Accelerate Your Datadog Roll-Out with RapDev

Datadog has the power to transform your operations, deepening the way you use real-time data from your applications. Getting the maximum return on investment from your Datadog usage — quickly — is easy when you have an expert partner. **That's where RapDev can help.**

What do companies need from their Datadog deployments?

- ✓ Leveraging Datadog's advanced features quickly turns potential ROI into real value right away.
- ✓ When internal personnel aren't experienced with Datadog, it can be tricky to enable the most in-depth dashboards and monitoring tools.

What solutions does RapDev offer for Datadog?

- ✓ You can choose to have an on-site advisory workshop that focuses on quickstart procedures and tagging best practices. This is an effective way to hit your next rollout milestone in a hurry.
- ✓ More complex multi-phase deployments are also available to achieve full APM, logging and infrastructure monitoring capabilities for 2-3 core applications.
- ✓ You can also opt for a custom-metric and custom-tagging deep dive that helps you visualize your business metrics (such as order volume, order value, abandoned carts and more) in Datadog.

Why choose to work with RapDev on your Datadog roll-out?

RapDev is one of two certified Datadog partners, putting us at the head of the industry in expertise and engagement.

Our team has dedicated Datadog engineers and architects ready to address highly specific issues in real-time over Slack.

Short- or long-term, our teams work with you to make Datadog suit your specific infrastructure and business objectives.

Reach out today to get the exact Datadog experience your business wants and needs.
