# Design your app

| The user needs to... | The feature could be... |
| --- | --- |
| 1. ------------------- | ------------------------------------ |
| 2. ------------------- | ------------------------------------ |
| 3. ------------------- | ------------------------------------ |
| 4. ------------------- | ------------------------------------ |
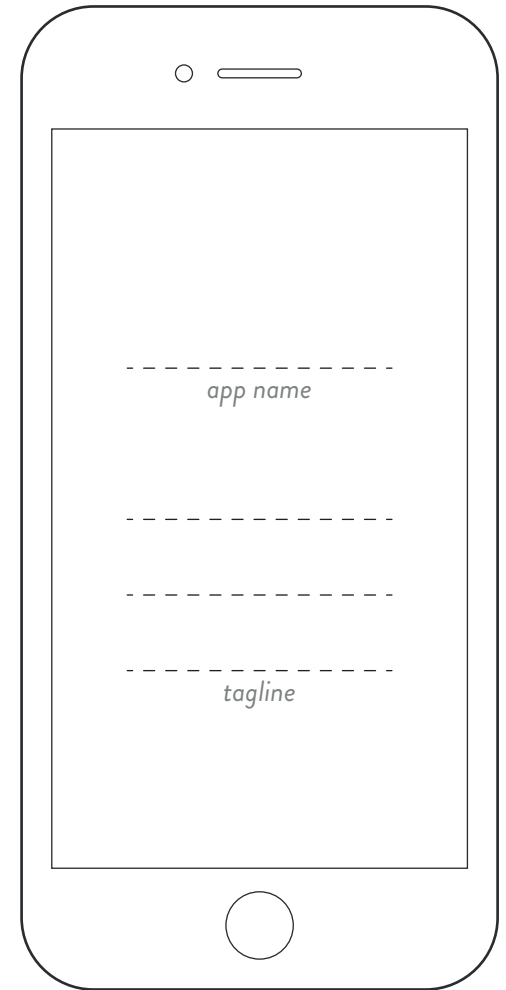

*app name*

*tagline*

Think about what your user needs to be able to do, and the information or feature your design needs. Note down an app name and snappy tagline, too.
