

Cincinnati Healthcare Center

A Thermoplastic Rubber Roof Coating to Extend the Roof's Life

BEFORE

AFTER

Project:

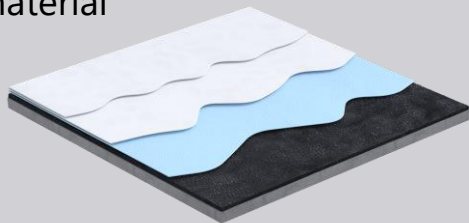

Healthcare Center
Cincinnati, OH

Scope: 12,000 square feet

System used:

Karnak 502 Thermoplastic
Rubber Roof Coating over
Modified Bitumen membrane

Warranty: 10-year labor and
material

This aged modified bitumen roof membrane

was leaking and showing signs of wear and tear. Instead of replacing the roof with completely new material (and disposing of the old material in a land fill), this healthcare center in Cincinnati decided to restore the roof with Karnak 502 Thermoplastic Rubber two-part roof coating.

This choice saved the customer tens of thousands of dollars and extended the roof's life by 10 to 15 years.
