

LVT MOUNTING OPTIONS

LiveView Technologies Units have multiple mounting options to best fit your needs.

- Increased flexibility and customization
- Easy mobility

WHAT ARE THE MOUNTING OPTIONS?

Every unit from LVT has the flexibility of different mounting options. This is possible because of the mobility of the units. They are off-grid and do not rely on traditional communication or internet links. Most customers choose the rapid deploy trailer. When fully deployed, the trailer is eight feet wide, eight and a half feet long, and more than 22 feet tall. Each trailer relies heavily on overt security solutions and allows for increased deterrence. The mobile trailers also leverage solar power. However, in some areas where there is less sun exposure, they can be augmented with fuel cell generators.

However, if a more covert option is desired, or if there isn't enough room for a trailer, LVT has five other mounting options, including a permanent pole or even a wall mount. This means that LVT can place security anywhere it's needed which increases the flexibility and abilities of LVT security solutions.
