

Meeting room visualization

Find the closest available meeting room

Locate your nearest bookable room

If you have indoor positioning set-up on your map, you can choose to find the closest meeting room to your current location. Our intuitive color-coding function will show you at a glance which meeting rooms are booked and which are free. Investing in our meeting room visualization tool saves users valuable time when it comes to scheduling meetings.

Book rooms in one click

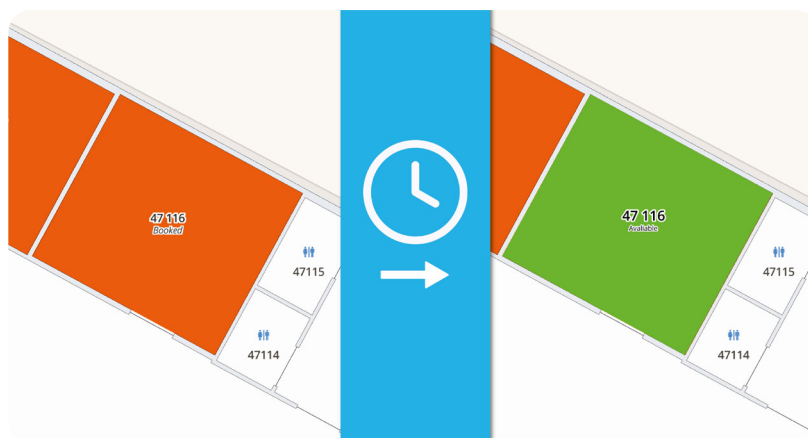

With MazeMap's room booking tool you can secure a room quickly and easily. What's more, we can integrate with Google and Outlook calendars, or your university timetabling system. You'll see a URL appear in your schedule, which will give you directions to the room. You can use the map on mobile, tablet, or computer and it doesn't require an app. We combine indoor and outdoor directions too, so you can navigate seamlessly from your home to your required destination.

Stop 'false' bookings

MazeMap's meeting room visualization tool also integrates with sensor systems to show you whether the meeting room is physically in use or not. You can configure the room settings to free up a booked room if it is left idle for X amount of time. This reduces instances of people booking rooms, but never actually showing up.

If you'd like to discuss how MazeMap can help you, get in touch for a non-committal chat.
