

Energy policy

Renaissance acknowledges that the availability of fossil fuels is limited and that their use may lead to climate change. Therefore, Renaissance issued this Energy policy with the purpose of raising awareness about this issue, for world-class energy efficiency and to reduce the environmental impact of energy use.

- Renaissance aims to decrease the environmental impact of energy consumption and associated emissions by taking environmental conservation measures and aims to explore the use of renewable energy such as solar energy and biogas.
- Renaissance strives for continuous improvement by setting annual energy efficiency targets by planning actions to achieve these targets.
- The consumption of electricity, gas and fuel shall be registered and reported monthly. The comparison shall be the driver of our energy-saving efforts.
- Energy consumption, carbon footprint and energy-saving efforts shall be made public through the Renaissance Sustainability Report.
