MACROBOND

Chart Server

Feed your charts to a wider audience.

The Chart Server is a part of Macrobond's Render Solutions. It allows users to programmatically generate up-to-date Macrobond charts, including corporate style sheets, for publishing onto web pages, mobile applications, or automated reports.

The server uses the same components as the Macrobond client application and renders the same charts via API available over HTTP. Charts can include Macrobond's core data, as well as in-house data and premium add-ons (subject to enterprise third-party agreements).
