

Job Description

Full-Stack AI Developer (Jnr)

Location: Paddington, London

<https://www.voxlydigital.com/hiring>

ABOUT VOXLY DIGITAL

AI Driven Enterprise Transformation

Voxly Digital is a London-based software company building Conversational AI and Enterprise AI services. Our client base is really large companies like Diageo (we're talking Baileys, Don Julio, etc ... they are huge and they love us!), the Royal Navy, Bristol Airport in the UK, and many more.

Our list of projects and roadmap is a mile long ... and we are looking for you!

Our mission is simple:

- We connect brands and consumers through Conversational AI.
- We bring new possibilities to Enterprises through AI projects in areas like Advertising and Marketing (more are coming ...)
- We believe that Conversational AI is the most human technology ever invented.

We have an amazing set of customers like Diageo (owners of Guinness & Johnnie Walker + We've just launched their very first Generative AI experience globally!) and the UK Royal Navy. Prior to AI, we built over 35 Amazon Alexa skills for a wide range of companies including the NHS, Cadbury, Spider Man: Into the Spider-Verse, O2, Penguin Random House, Unilever, Coty, Joe Wicks (The Body Coach), Yoplait, Vitality Insurance and many more.

Voxly Digital is about more than just great products; we're a great place to work too. The bottom line is we really care about our employees as people. How are they doing outside of work? What motivates them? What bogs them down? What are their goals in life? Our culture is all about doing amazing work with amazing people – and that's only possible through caring about the team!

ABOUT THE ROLE

As a Junior Full Stack Developer, you will spend most of your day coding. This will include front-end, back-end and DevOps tasks. You will also play a key role in architecting and building our new Conversational AI SaaS platform - called CAISSE.

Aside from coding we also expect you to communicate with our customers on project specifications, delivery and design. Providing excellent customer interaction is something we don't compromise on. If you provide yourself, you'll have the possibility of running large client projects (if that's something you want to do of course ...)

Here are the highlights:

- You'll be developing full stack codebases that leverage LLMs from Open AI and others (GPT 3.5 & 4), LangChain, Pinecone, Chroma + other cool AI tech.
- You'll also be working in vision and image recognition (ie. Open AI GPT Vision), labelling, and decision making.
- You'll be at the forefront of developing enterprise scale AI products from scratch.
- You'll help develop the CAISSE platform we are bringing to market.
- You'll work in the amazing Paddington basin where you can park your bike in the building, get coffees along the canal, etc.

ABOUT YOU

You will need to have:

- Up to 1 year of paid software development experience.
- A live side-project(s) and / or other evidence that you can run code without supervision.
- Proficiency in JavaScript, TypeScript, HTML and CSS.
- Strong knowledge of backend systems, databases, or BaaS (Firebase and AWS Amplify count).
- Some experience in CI/CD and DevOps best practices.
- Some evidence of clear technical writing (documentation, OSS contributions, essays).
- The ability to communicate clearly and helpfully with enterprise customers.
- A keen interest in AI and the willingness to learn.

It would be amazing if you have:

- Proficiency in backend conversational frameworks like Jovo or Dialog Flow.
- Familiarity with analytics products (GA4, MixPanel, Amplitude).
- Experience in other programming languages.

COMPENSATION & BENEFITS

Your compensation is made up of:

- Your Salary
- A bonus scheme that pays twice per year (if you qualify for one).

Benefits include:

- 20-days paid holidays.
- Nest Pension Plan with matching contribution scheme.
- Company MacBook Air (if you want ...).
- Paid Training opportunities to enhance your skills.
- Company paid travel re-imbursement.

WORK LOCATION & HOURS

- This is a full-time hybrid role and involves working in our Paddington office 3-4 days per week.
- Teamwork is key for us, and if you love collaborating and engaging with colleagues in person, you'll fit right in.

INTERVIEW PROCESS

- 30-minute meeting.
- LangChain Hack / Test Project (it should take you an evening or two to complete). You'll need to come in with something that's actually running ... no excuses ...
- In-person 1 hour interview to present the project and your background and experience.

CONTACT DETAILS

Voxly is an equal opportunities employer. Job applicants may be asked to provide evidence of their ability to work and live in the country where the role exists. If you are interested, please send us your CV, your GitHub (or similar), plus a short email to freshthinking@voxlydigital.com.
