

### The GPRS **Green Box Guarantee**

is an industry-leading, proprietary program that provides contractors the necessary assurance of safety when drilling, cutting, or coring through an elevated concrete deck. When GPRS places a Green Box within a layout before cutting or coring concrete, we guarantee it will be **FREE OF OBSTRUCTION.**

#### **SAFETY**

Electrical conduit strikes present a high risk of electric shock to the equipment operator and nearby workers. Strikes can also cause nearby operations and work to be shut down. Cutting, coring, or drilling through a post-tension cable can cause structural damage or injury. Severed post-tension can lead to compromised structural integrity, creating severe safety concerns for everyone involved ■

#### **COST SAVINGS**

It can cost thousands of dollars to repair damaged wire and conduit due to an electrical strike. Post-tension cable repairs and restressing can cost several thousand dollars per tendon. Cutting through a post-tension cable, critical rebar, electrical conduit, or other obstruction can cause a job site to be shut down, increasing costs ■

#### **EFFICIENCY**

GPRS Project Managers can accurately clear dozens of cutting/coring areas per day. Cutting, coring, and drilling through concrete clear of obstruction can significantly speed up the demolition process. When contractors can keep their schedule from experiencing delays due to line strikes and damaged reinforcement, change orders and budget overruns are decreased ■

#### **CLEAR COMMUNICATION**

Green Box Guarantee information is presented directly on the surface of the coring location. GPRS performs post-job walkthroughs to explain all Green Box Guarantee locations and parameters. GPRS leads the industry in project accuracy. Year after year, our performance is well over 99% accurate ■

#### **CONCRETE IMAGING**

When cutting or coring, there is an inherent risk of striking rebar, conduits, and post-tension cables. An accidental strike results in higher repair costs, schedule delays, and safety hazards for your employees. GPRS's Green Box Guarantee system gives you the confidence to keep your team safe when cutting and coring concrete.

- ✓ **TRAINING**
- ✓ **EQUIPMENT**
- ✓ **METHODOLOGY**

The use of proper training, multiple technologies and a field-tested methodology are the key to a successful concrete scan. GPRS is a master of all three components through the utilization of the SIM Specification. [SIMSPEC.ORG](http://SIMSPEC.ORG)
