- ✓ TRAINING
- ✓ EQUIPMENT
- ✓ METHODOLOGY

The use of proper training, multiple technologies and a field-tested methodology are the key to a successful utility locate. GPRS is a master of all three components through the utilization of the SIM Specification.

POWER

KEEPING YOU ON THE GRID

GPRS IS HERE TO HELP.

POWER GENERATION

Power plants typically have a complex underground maze of utilities, pipes, and subsurface obstructions. GPRS can determine the location of these utilities prior to construction or renovations and provide a detailed map. In addition to damage prevention, GPRS can update existing utility as-built drawings ■

POWER SUBSTATIONS

The dangers of excavation within substations are many. For most brownfield substations, drawings and records of underground utilities are inadequate and out of date. Existing duct banks or grounding grids are some of the common anomalies needing to be identified. Utility mark outs inside the compounds are crucial for the success of the project ■

POWER TRANSMISSION

Whether you are installing a new transmission tower in a rural location or a new transmission pole in a urban setting, GPRS has you covered. Often only utilizing public locates can still pose many risks for unknowns. GPRS can help with locating utilities for all locations, whether in the public ROW or on private property ■

POWER DISTRIBUTION

Distribution of power comes with its own challenges. Power needs paths to go once it leaves the substation. Creating new paths means that new poles must be installed, and underground duct banks must be created. It's essential to identify utilities throughout these processes ■

GPRS

SERVICES

UTILITY LOCATING

Our utility locating services designate the horizontal and vertical position of buried facilities on public and private property.

LEAK DETECTION

Routine water loss surveys and leak detection complement our locating services and can reduce non-revenue water.

VIDEO PIPE INSPECTION

CCTV inspections give detailed pipe location and condition information. Our reports detail each pipe by segment.

MAPPING AND MODELING

Our Deliverables Team can create satellite image overlays, 3D models, CAD drawings and even aerial drone imagery.
