

NATIONWIDE ROLLOUT PROJECTS?

GPRS IS HERE TO HELP.

CURBSIDE PICKUPS AND DRIVE-THROUGH EXPANSIONS

As grocers and other retailers expand their capabilities in relation to curbside pick up, more stations, signs, and pedestals must be placed along curbs and in parking lots. Without a private utility locate during the installation process, there's a risk of underground utility strikes ■

TENANT IMPROVEMENT AND MAINTENANCE

With the rise of e-commerce in the changing tides in the retail space, contractors and owners are tasked with the re-purposing of vacant box stores and offices in strip malls. GPRS can provide critical information regarding the subsurface such as the location of utilities, reinforcements, and USTs ■

NEW CONSTRUCTION – RETAIL ROLLOUTS

When relocating cash wraps, launching new products, and remodeling a store, the need to cut or core concrete slabs presents a safety risk. Saw cutting and coring into an electrical conduit not only presents risk for the operator and nearby workers but also risks shutting down the site or nearby sites ■

EFFICIENCY UPGRADES

Customer service is a central focus for retailers and restaurants, the same kinds of upgrades, upgrades are often made to increase efficiency and reduce wait time. When adding canopies, drive-through lanes, or self-checkout kiosks, excavation must occur. A comprehensive private utility locate is a must in order to mitigate risk ■

TOP RETAIL CLIENTS INCLUDE:

UTILITY LOCATING

To ensure the overall timely success of your project, utility detection is critical to any construction project where subsurface excavation is planned. If this critical first step is ignored, the risk for injury increases, budget overruns can multiply, and your schedule can be delayed.

3D LASER SCANNING

GPRS Intelligently Visualizes The Built World™ above and below ground as the leading provider of accurate and creative 3D laser scanning solutions for the construction, architecture, and engineering industries.

CONCRETE IMAGING

There is an inherent risk of striking rebar, conduits, and post-tension cables during the cutting or coring process. If a strike occurs, repair costs begin to add up, delays creep into your schedule, and it creates a safety hazard for your employees.
