

Powerproject Vision

Bring transparency, control and integrity to your Powerproject programmes

Developed with input from the construction industry, Powerproject Vision delivers a unique solution for contractors with project planners working in a disconnected and dispersed environment.

By handling all programmes in one central location, businesses can be assured that the right version of the project is being worked on, that the file is backed up and is available for review from any location.

By providing a web-based portal for managing Powerproject plans, Powerproject Vision enables:

- One common access point for all your project data, ensuring one version of the truth
- Consistent use of corporate project templates for compliance to evolving standards

- Workflow to provide review, approval and amendment tracking
- Automated routines to remove labour-intensive steps
- Up to date reports without hours of manual consolidation

"Powerproject Vision enables us to view live project data across all our projects bringing greater transparency and consistency. It will help our planners to focus on the day job and not be distracted by lengthy reporting processes, whilst allowing the wider business to understand project status at a glance."

Derek O'Neil, Head of Planning, Careys Civil Engineering

How it works

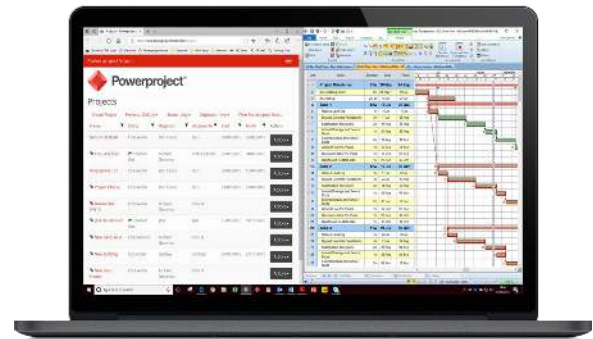

- When starting a new project, Powerproject Vision is used to create a programme using one of the approved project templates hosted in the system
- A number of roles and fields within the project can be assigned, such as Planner, Manager, Reviewer etc.
- To work on the plan, the programme file is “checked out” to a named user, who can work on it locally in Powerproject until they are ready to submit it back to the online portal
- Notifications can be sent when key actions are performed, such as requests to approve a plan
- Fully customised workflow manages all steps. For example, upon approval, a baseline and delivery programme can be generated
- At each step, copies of files are saved to provide a full change history

Implementation

Powerproject Vision is a fully hosted service, available to customers based on your expected number of users.

Elecosoft’s expert consultants will work with you to design your custom workflow, configure the system to your needs and help you pilot the process on your initial projects.

Our team can also assist with the production of bespoke business intelligence dashboard reports, based on the KPIs that need tracking.

“When Elecosoft first outlined the concept of Powerproject Vision to us, we immediately realised the potential it had to remove complications from our planning processes. We were pleased to be the first customer to use Powerproject Vision on live projects and to work with Elecosoft in refining the solution.”

Derek O’Neil, Head of Planning, Careys Civil Engineering
