

Telegram Channel - Smart Alerts

A Telegram channel is a power-charged version of the WhatsApp Broadcast list and is a medium for one-way broadcast messages. This quick guide will guide you through the process of creating a Telegram channel for Nansen smart alerts and obtaining the Chat ID from the @NansenBot.

Before you start:

- Download and install Telegram Desktop or use the web version <https://web.telegram.org>*
- *Telegram web doesn't allow the adding of bots to its channels

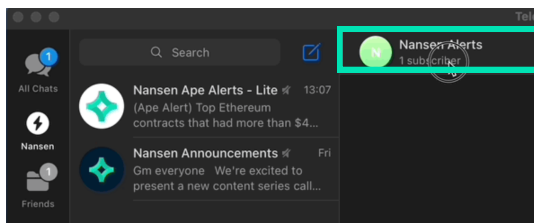

01 NEW CHANNEL

Select **New Channel** on the left panel by clicking on the blue 'notepad' icon.

- Enter your channel name
- Adjust the channel settings if needed

02 INVITE @NANSEN BOT

From your newly created channel go to **Channel Info** by clicking on the **Subscribers** text.

Select **Administrators** and then **Add Admin**.

Type in and select **NansenBot** and change the settings (NansenBot only needs to post messages).

03 GET THE CHAT ID

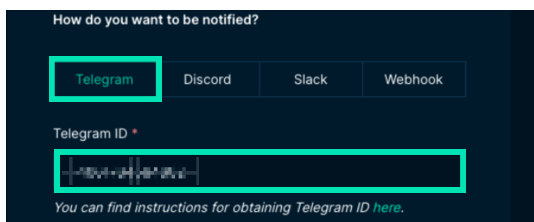

Post the message **/chat_id** to the channel to get its ID.

Copy this ID by right-clicking and selecting copy

Note: some Chat IDs include the minus sign!

04 ADD CHAT ID TO NANSEN

Navigate back to **pro.nansen.ai**

Paste your Chat ID into the **Telegram ID** field within the Nansen Smart Alerts form
