MPGSOC: Tailored security for your needs

MPGSOC focuses on securing organizations, solving complex problems and helping you being compliant. Our services are tailored to your unique business needs to help you manage your continuous threat exposure.

Who Manages Your Security Matters

Hands-on experts with a mission-first attitude that do not shy away from difficult tasks. Through our team's expertise and knowledge, your organization can maximize the effectiveness of the CrowdStrike EDR and Sumo Logic SIEM platforms out of the gate. With 24/7 incident analysis, response and remediation, the **MPGSOC** team will have your back and enable you to focus your business.

MPGSOC Certifications: When we say our team is highly skilled, we mean it!

Our team carries the following certifications: CISM, CTT+, Certified Ethical Hacker, CISSP, CISA, CCSE, CCSA, CompTIA Security+, CompTIA Network +, CompTIA Linux+, CCFA, Sumo Logic Certifications, Zero Trust Fundamentals, Cloud Security, AWS Certified Security Specialty, AWS Solution Architect Professional, PMP, Certified Scrum Master, Certified Customer Success Manager, and more.

About MindPoint Group

Since 2009, MindPoint Group has helped private and public sector organizations identify and defend against cybersecurity threats, close security gaps, achieve compliance, and manage risk. Our managed security services are built to meet the goals of your business. As a full-service ISO 9001-certified cybersecurity organization, MindPoint Group is dedicated to working as a trusted partner in strengthening your cyber defense while optimizing security operations and posture.

Managed Security Service Highlights

Skilled Team – Seasoned security professionals protect you and improve your security, plus a designated customer success manager makes your experience as smooth as possible.

Incident Response – In the event of a breach, effective processes, procedures, and communication plans manage the response effort and shorten the time to recovery.

Shorter Dwell Time – MPGSOC detects potential security threats early and responds swiftly to minimize the amount of time an attacker goes unnoticed within your environment.

Malware Detection – The MPGSOC toolset detects malicious activities, suspicious patterns, and malware within your environment.

Security Alert Reporting – With customizable dashboards, reports, and alerts created specifically for your business, MPGSOC enables informed decision-making, compliance adherence, and effective communication with stakeholders.

Continuous Coverage – Sleep better at night knowing MPGSOC operates 24/7/365.

Reduced Ransomware Risk – Security experts utilize tools to analyze traffic and security log alerts, enabling swift mitigation efforts and minimizing the impact and spread of ransomware.

Insider Threat Mitigation – MPGSOC's MDR and Managed SIEM tools track your network activities, allowing for the proactive detection of anomalous behavior, unauthorized access attempts, and data exfiltration.

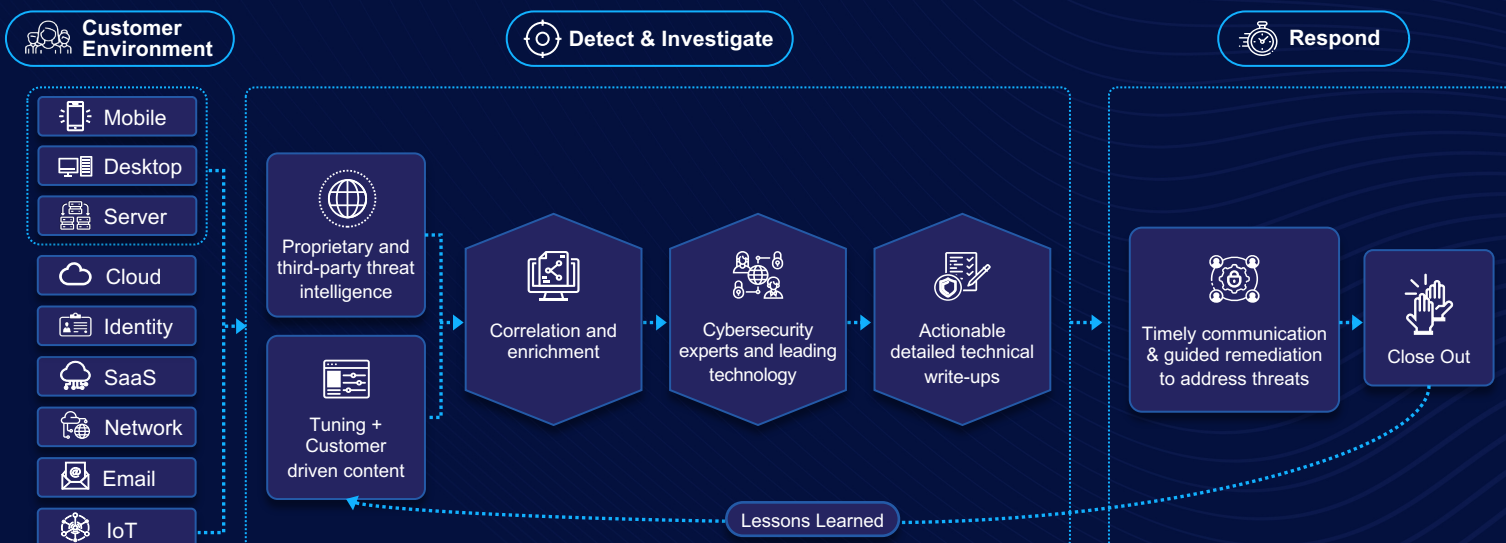

Vulnerability Visibility – MPGSOC identifies exploited vulnerabilities early and enables your organization to address them within your system, application, or infrastructure.

Greater Flexibility – Our tools are designed to grow with you and our experts build a custom plan around your current resources. Have your own SIEM or EDR you want to continue to manage yourself? Pursuing more stringent regulatory requirements? We can help with that.

Continuous Threat Detection and Incident Response

Managing Your Data Flow

MPGSOC collects log data for visibility over your infrastructure, empowering us to monitor and investigate. We bring in third-party intelligence feeds and use continuous tuning to customize your content, ensuring the detections are effective. MPGSOC provides actionable technical write-ups to empower timely response and remediation. Our continuous improvement processes ensure that we capture lessons learned to drive data enrichment and improve detection and response going forward.
